FOREWORD

India, with its vast geographical expanse and diverse population, relies heavily on its road infrastructure to connect communities, facilitate trade and commerce, and enable social mobility. Understanding the dynamics of this vital transportation network is crucial for policymakers, researchers and all stakeholders involved in the development and management of India's roads. The publication "Basic Road Statistics of India", brought out annually by the Transport Research Wing of the Ministry of Road Transport and Highways, provides detailed information on State/UT-wise road length data of various categories of roads at national, State, district and local levels.

The total road network in the country has increased from 63.60 lakh km in 2019–20 to 64.98 lakh km in 2020–21 and further to 65.92 lakh km in 2021–22, reflecting steady expansion of road infrastructure in the country. The road network consists of National Highways, State Highways, District Roads, Rural Roads, Urban Roads and Project Roads, which together form the backbone of transportation in India. Among these categories, Rural Roads constitute the largest share of the road network at about 69.92 percent as on 31st March 2022, highlighting the importance of rural connectivity in supporting socio-economic development.

Road transport continues to be the dominant mode of transportation in the country due to its accessibility, operational flexibility, door-to-door service and reliability. Consequently, the share of road transport in both freight and passenger movement has been increasing over the years.

Recognizing the importance of integrated infrastructure development, the Government of India has launched several initiatives to strengthen connectivity and improve logistics efficiency across the country. The PM Gati Shakti – National Master Plan for Multi-Modal Connectivity provides a framework for coordinated infrastructure planning across various infrastructure related agencies of the Central Government and State Governments.

The present issue of "Basic Road Statistics of India 2020–21 and 2021–22" provides comprehensive information on the road network of the country based on data received from various States, Union Territories and other agencies. I hope this publication will be useful to administrators, planners, policymakers and researchers engaged in infrastructure development and transport planning.

I gratefully acknowledge the support and cooperation extended by all the agencies of the States and Union Territories in providing the required information to the Transport Research Wing of the Ministry in the prescribed format. I also appreciate the efforts of the officers and staff of the Transport Research Wing in bringing out this publication.

(V. Umashankar)

Basic Road Statistics of India - Acknowledgement

The Ministry of Road Transport and Highways (MoRTH) has consistently endeavored to strengthen the planning and management of the country's road infrastructure through the systematic compilation and dissemination of reliable data. The annual publication, "*Basic Road Statistics of India*", constitutes a vital repository of information on the road network and serves as a key reference for policy formulation, infrastructure planning, and maintenance strategies across the country.

The present edition, covering the years 2020-21 and 2021-22 (with data updated up to March 2022), is based on inputs received from a wide spectrum of agencies across States and Union Territories. These include Public Works Departments, State Road Development Agencies, Municipal bodies, Panchayati Raj Institutions, Railways, Forest and Irrigation Departments, Electricity Utilities, Ports, and Military Engineering Services, among others. The comprehensive nature of this data enables a holistic assessment of the extent and composition of India's road infrastructure.

This publication is the result of a coordinated effort led by the Transport Research Wing (TRW), in close partnership with multiple stakeholder agencies. I place on record my deep appreciation for the cooperation extended by all States, Union Territories, and contributing departments in providing timely and accurate information in the prescribed formats.

I also acknowledge the leadership of the Secretary, MoRTH, whose guidance has been instrumental in bringing out this publication. The commitment and diligence of the officers and staff of the Transport Research Wing have been central to this effort and deserve special commendation.

It is envisaged that this publication will continue to serve as a robust statistical foundation for infrastructure development, facilitate informed policy interventions, and support the efficient management of India's road network.

(Mahmood Ahmed)

PREFACE

Reliable and updated road statistics are essential for evidence-based decision-making, policy formulation and infrastructure planning. This publication aims to support these objectives by presenting detailed information on road length across different categories and by analysing the distribution of road infrastructure across States and Union Territories.

As per the latest available data, the total road network in the country increased from 63.60 lakh km in 2019–20 to 64.98 lakh km in 2020–21 and further to 65.92 lakh km as on 31st March 2022. Among various categories of roads, Rural Roads constitute about 70 percent of the total road network, followed by District Roads, Urban Roads, Project Roads, State Highways and National Highways.

This publication also presents an overview of the growth of the road network over time, State/UT-wise distribution of different categories of roads, and major initiatives undertaken by the Ministry for improving road connectivity across the country.

The data presented in this publication has been compiled from information provided by various Central and State Government agencies including Public Works Departments, Municipal Bodies, Railways, Ports, Forest Departments and other organisations. I express my sincere gratitude to all data-source agencies for their valuable cooperation.

I also acknowledge the dedicated efforts of the officers and staff of the Transport Research Wing, led by the then DDG Shri Dinesh Kumar, whose sustained efforts have made this publication possible.

EXECUTIVE SUMMARY

1. The current volume of 'Basic Road Statistics of India-2020-21 & 2021-22' offers a comprehensive overview of the country's road statistics for the years 2021 and 2022. It encompasses eight sections, detailing information on road length, surfaced road length, and major initiatives undertaken by the Ministry of Road Transport and Highways. The data presented in this report is compiled from various state and union territory departments, including State Public Works Departments, Municipalities, Panchayats, Railways, Forest Departments, and others.
2. The Basic Road Statistics of India 2020-21 & 2021-22 concatenate data on the construction of various road categories across National, State/UT, District, and Local (Municipal/Panchayat) levels. This report underscores the propitious contributions and responsibilities of the various departments, organizations, and agencies involved in the construction and maintenance of these different categories of roads in India.
3. **Section 1** of the report provides an overview of road network in India. This section throws lights on category-wise break up of construction of roads in India, long run trend in the construction of road, decadal CAGR analysis and investment in highways by both Public and Private Entities. This section highlights following points.
 - i. India has a road network of 64,98,284 Km and 65,92,801 Km of roads as on 31st March, in 2021 & 2022 respectively, which is the second largest in the World after the United States of America with a road network of 66,45,582 Km (**Source: IRF World Road Statistics 2022 (page 47)**). The road network registered a year-on-year growth rates of approximately 2.16% from 2020 to 2021 and 1.45% from 2021 to 2022. The Rural Roads constitute 69.92% (46,09,907 Km) of total road network in the country as on 31st March, 2022, followed by District Roads with 6,52,983 Km (9.90%), Urban Roads 5,86,245 Km (8.89%), Projects Roads 4,08,582 Km (6.20%), State Highways 1,93,741 Km (2.94%), and National Highways 1,41,344 Km (2.14%).
 - ii. The construction of roads in the country has increased consistently from 3.99 lakh Km in 1951 to 65.93 lakh Km in 2022, i.e. an increase of almost 17 times in 71 years.

iii. Total length of surfaced roads has increased from 41,29,448 Km in 2019-20 to 42,53,392 Km in 2020-21 and 43,21,674 Km in 2021-22. In turn registering a year-on-year growth in the total length of surfaced roads was approximately 3.0% from 2019-20 to 2020-21, and approximately 1.6% from 2020-21 to 2021-22.

iv. State/UT wise distribution of total road construction (excluding JRY roads) depicts, as of 31st March 2022, Maharashtra accounted for the largest share (10.98%) with 6,25,023 Km in total length followed by Uttar Pradesh (8.86%) with 5,04,468 Km, Assam (8.80%) with 5,01,203 Km, Karnataka (6.86%) with 3,90,772 Km and Madhya Pradesh (6.60%) with 3,75,863 Km. (**Annexure 2.1.3**). These five States with the largest road networks accounted for a combined share of about 42 % of road length in India.

v. Public expenditure by the Government of India for construction of roads in rural as well as urban areas increased during the period 1950-51 to 2021-22. Public investment's share in the road sector has increased from 51.7 % in 2012-13 to 87.3 % in 2019-20, whereas that of private

investment decreased from 48.3% to 12.7%.

vi. Public expenditure by the Government of India for construction of road in rural as well as urban areas increased consistently since 2013-14 (Chart 1.8). The share of public investment has been increased during the period 2013-14 to 2021-22, while that of private investment has been declined (Chart 1.8). It may be noted that public expenditure constitutes 91.3% of total investment in road sector in 2022, which was only 57.4% in 2013-14. However, there has been a steady decline in total private investment in road construction, as a result, total share has declined from 52.6% in 2013-14 to 8.7% in 2021-22.

vii. Indicators of road infrastructures like density of roads per 1000 Sq. Km and Density of road per 1000 population have been on increase since 2011-12. Road Density may be considered as an indicator of accessibility of road per thousand Km, which has increased not only for All India but for Rural and Urban areas as well (Table 1.9). The total road density per 1000 Sq. Km has increased from 1,422.63 in 2011 to 2005.43 (including JRY Roads) in

2022. Correspondingly, Rural and Urban road density has increased (Table 1.9). Similarly, road density per 1000 population increased from 3.86 in 2011 to 4.79 (including JRY Roads) in 2022.

4. **Section 2** of the report gives details on State / UT wise break up of National Highways. India's road network (including highways) is one of the most extensive road networks in the world with 65.92 lakh kilometre as on 31st March 2022. With the proactive policy initiatives in the sector, the road network has continuously been expanding in the country. The total length of National Highways has increased from 1,32,995 Km in 2020 to 1,38,376 Km in 2021 and 1,41,344 Km in 2022, recorded an increase of 4.05% change in 2021 over 2020 & 2.14% change in 2022 over 2021. For the period 2020-2022, National Highways in the country are fully surfaced. State/UT's share of National Highways amongst other factors depends on the geographical area. On States front, Top 5 States shares 41.13% of total National Highways network in the country during 2021-22. Maharashtra has the highest NH network in 2021-22 with

18,317 (12.96%) followed by Uttar Pradesh and Rajasthan with 12,216 Km (8.64%) and 10,477 Km (7.41%) respectively (Table 2.5 and Chart 2.7). Madhya Pradesh with 8,911 Km (6.30%) and Andhra Pradesh 8,207Km (5.81%) rank fourth and fifth respectively.

5. **Section 3** of the report brings out State/UT wise distribution of State Highways in country. Total State Highways constructed was 1,91,608 Km as on 31st March 2021 , which constitute 2.95% of total road network in the country and 99.43% (1,90,520 Km) of SHs are surfaced (Table 3.1). The growth rates for both total length and surfaced SH were quite substantial from March 2020 to March 2021 recording Year-on-Year growth rate of 7.21%. Total State Highways cloaked a smaller yet consistent growth (YoY of 1.11%) from March 2021 to March 2022 and as on 31st March 2022 constructed was 1,93,741 Km, which constitute 2.94% of total road network in the country and 99.42% (1,92,621Km) of SHs are surfaced. Maharashtra has the highest share of State Highways network in the country i.e. 16.77% (32,486 Km) followed by Karnataka 14.39% (27,881 Km),

Rajasthan 8.74% (16,942 Km), Gujarat 8.41% (16,292 Km), and Andhra Pradesh 6.97% (13,500 Km). These five States accounted for about 55.28 % of the total length of SHs in the country.

6. **Section 4** throws lights on State/UTs wise distribution of total length of District Roads. The total district road constructed was 6,52,983 Km as on 31st March 2022, of which surfaced roads constitute about 96.18% of total district road network (i.e. 6,28,038 Km). There has been consistent increase in the construction of District Roads till 2014-15, thereafter, it declined to 5,61,940 Km in 2015-16. However, total length constructed has taken upturn since 2016-17. The year 2021 & 2022 registered an increase in construction of districts roads compared to 2020, road construction has increased from 6,16,964 Km in 2019-20 to 6,39,888 Km in 2020-21 and 6,52,983 Km in 2021-22. Thus registered an Year-over-Year (YoY) growth from 2019-20 to 2020-21 of 3.71% and YoY Growth from 2020-21 to 2021-22 of 2.05%. For the year in 2021-22, Maharashtra topped the States in the total length of District Roads in the country with 1,11,076 Km (17.01%) followed Uttar Pradesh 62,141Km

(9.52%), Karnataka 56,166 Km (8.60%) , Tamil Nadu 52,677 Km (8.07 %) and Madhya Pradesh 50,714 Km (7.77 %). These five States together account for 50.96 % of the total length of District Roads in India.

7. **Section 5** of the report highlights on Rural Roads constructed by Panchayati Raj Institutions, (Zilla Parishad, Panchayat Samiti, Gram Panchayat), roads of the Pradhan Mantri Gram Sadak Yojana (PMGSY) and roads constructed by the State PWD Rural Roads. India has rural road network (including JRY Roads) of 45,58,425 Km and 46,09,907 Km as on 31st March 2021 & 2022, respectively (**Annexure 1.1.4 & 2.1.4**). Rural Roads constitute around 70% of total road network in the country as of 31st March, 2021 & 2022. Thus, rural roads registered the Year-Over-Year (YoY) growth from 2019-20 to 2020-21 of approximately 1.39%, and YoY of approximately 1.13% from 2020-21 to 2021-22. The total rural road (excluding JRY road) constructed as on 31st March, 2021 was at 36,58,425 Km of which 24,80,278 Km are surfaced road (67.80 %) and as on 31st March, 2022 it was at 37,09,907 Km of which 25,13,060 Km are surfaced road (67.74%). Among

States, Assam accounted for the largest share of Rural Roads with 4,54,504 Km (12.25%) followed by Maharashtra 4,06,143 Km with (10.95%), Uttar Pradesh 3,04,526 Km (8.21%), Bihar 2,60,171 Km (7.01%) and Madhya Pradesh 2,33,817 Km (6.30%). These five States account for about 44.72 % of the total length of Rural Roads in the country (Excluding JRY).

8. **Section 6** of the report gives details on Urban Roads network in the country. It includes Municipal Roads under Urban Development Departments of States and UTs, roads in Railway Zones, MES roads constructed by Military Engineering Services (MES) and Major and Minor Port Roads. As of 31st March 2021, the total length of Urban Roads was 5,75,296 Km, with surfaced roads constituting about 81.27% (4,67,534 Km) of the total, increasing to 5,86,245 Km by 31st March 2022, with surfaced roads making up 81.54% (4,78,015 Km). The construction of Urban Roads increased from 5,48,394 Km in 2019-20 to 5,75,296 Km in 2020-21, registering a growth of 4.91%, and further to 5,86,245 Km in 2021-22, marking a growth of 1.90%, with Urban Roads sharing about 8.85% of the total

road network in the country in 2021 and increasing to 8.89% by 2022. On States front, West Bengal accounted for the largest share with 95,180 Km (16.24%) followed by Uttar Pradesh with 71,602 Km with (12.21%), Rajasthan 45,961 Km with (7.84%), Karnataka 45,150 Km with (7.70%), Madhya Pradesh 35,698 Km with (6.09%). These five States account for 50% of the total length of urban Roads in the country.

9. **Section 7** of the report provides the details on Project Roads. This includes roads of Forest Departments, Irrigation Departments, Electricity Departments, roads in coal fields and coal mines of Coal India Ltd., roads under the plant areas of Steel Authority of India Limited (SAIL), National Mineral Development Corporation (NMDC), and Sugarcane Departments of States/UT and Border Roads Organisation (BRO). Projects roads are coming under the purview of Central and State Government agencies and departments. The Total length of Project Roads as on 31st March, 2021 was at 3,94,690 Km, of which surfaced road constitute about 45.33% (1,78,925 Km) of total Projects Roads. Construction of Project Road has increased from 3,86,954

Km in 2019-20 to 3,94,690 Km in 2020-21, registered a growth of about 2% on an average over previous period. Project Road shares 6.07 % of total road network in the country as on 31st March, 2021. Where as in 31st March, 2022 Total length of Project Roads was increased to 4,08,582 Km, of which surfaced road constitute about 45.37% (1,85,394 Km) of total Projects Roads and registered a year-on-year growth of about 3.52%. Among states, Gujarat accounted for the largest share (10.64%) in total Project Roads as

on 31st March 2022, followed by Uttar Pradesh (10.54%), Madhya Pradesh (8.65%), Karnataka (7.47%) and Assam (6.96%). These five States together account for about 44.26% of the total length of Project Roads as on 31.03.2022.

10. Section 8 of the report describes in detail on the initiatives taken by Ministry of Road Transport and Highways for improving the Road network in the country. This Section is followed by Annexures on Road Statistics.

Section - 1

SECTION - 1

ROAD NETWORK IN INDIA

OVERVIEW: ROAD TRANSPORT SECTOR IN INDIA

1.1 Road transport is a highly cost-effective mode of transportation in India. One of its key characteristics is its accessibility and flexibility, which allows it to penetrate every nook and corner of the country. Roads extend far into both rural and urban areas, connecting even the most remote locations. Unlike other modes of transport, such as railways or airways, road transport offers flexibility in routes and schedules, making it highly adaptable to changing needs and demands. Road transport generates numerous employment opportunities across various sectors, including driving, maintenance, logistics, and retail, thereby boosting the economy and supporting livelihoods. It can handle a wide range of cargo types, from perishables and consumer goods to heavy machinery and construction materials, making it suitable for different industries and sectors. In terms of passenger transport, road transport caters to a large volume of passengers by offering various options like buses, taxis, auto-rickshaws, and private vehicles, making it convenient for people from all walks of life. The Indian government has been investing significantly

in road infrastructure development, including the construction of highways, expressways, and rural roads under schemes like the Pradhan Mantri Gram Sadak Yojana (PMGSY). These efforts have further enhanced the efficiency and reach of road transport. Roads also serve as feeder lines to other modes of transportation, such as railways and ports, facilitating multimodal transport and ensuring the smooth movement of goods and passengers across the country. In essence, the extensive network, cost-effectiveness, flexibility, and ability to provide direct services make road transport an indispensable part of India's development paradigms. Road transport is the dominant segment in India's transport sector, which is evident by the fact that it is contributing 3.2 % to GVA against the total transport sector contribution of 4.53% for the year 2021-22, whereas the share of Railways was at 0.60%, Air Transport at 0.04% and Water Transport at 0.09%. (Source: Section 1.6 A) “Percentage Share of GVA by economic activity at current and constant prices” of National Accounts Statistics 2023) (<https://www.mospi.gov.in/publication/national-accounts-statistics-2023>).

1.2 The road network of the country consists of National Highways (NH), State Highways (SH), District Roads, Rural Roads, Urban Roads and Project Roads. The construction and maintenance of National Highways is mandated with the Ministry of Road Transport and Highways (MoRTH). State Roads are executed through the State Public Works Departments (PWDs). District Roads are constructed &

maintained by Public Works Department of States while Rural Roads are executed by Panchayati Raj Departments, State PWD/RWD Departments & National Rural Infrastructure Development Agency (NRIDA) of Ministry of Rural Development. Urban Roads are executed by Municipalities and Project Roads are constructed by various Central and State Government Departments.

Road Network Responsibilities in India:	
Type of Road	Managed by
National Highways (NH)	Ministry of Road Transport and Highways (MoRTH)
State Highways (SH)	State Public Works Departments (PWDs)
District Roads	Public Works Department of States
Rural Roads	Panchayati Raj Departments, State PWD/RWD Departments & National Rural Infrastructure Development Agency (NRIDA) of Ministry of Rural Development
Urban Roads	Municipalities
Project Roads	Various Central and State Government Departments

ROAD LENGTH-CATEGORY WISE

1.3 India has a network of over 64,98,284 Km of roads as of 31st March 2021 and 65,92,801 Km of roads as of 31st March 2022, which is the second largest in the world, after the

United States with 66,45,582 kilometres of roads (**Source: IRF World Road Statistics 2022 (Page 55)**). There has been a consistent increase in the construction of roads under various categories during the period 1950-51 to 2019-20 (Table 1.3).

1.4 This is primarily due to the proactive policy steps such as leveraging of Private and Public Investment and the deployment of innovative financing models initiated by Ministry of Road Transport and Highways. Besides this, projects like National Highways Development Programme, Bharatmala Pariyojana Phase-I, Special Accelerated Road Development Programme for North-Eastern region (SARDP-NE), Char Dham Pariyojana, Connectivity to the Border Areas, Connectivity to the Backward/ Aspirational Areas etc. added to enhance the length and the quality of road network in the country. The significant upturn in road construction is also due to the increase in public expenditure by the Government of India to a critical sector that generates employment and supports infrastructure, act as feeder to other modes of transportation.

1.5 The total road constructed has increased from 63,60,004 Km in 2020 to 64,98,284 Km in 2021 and 65,92,801 Km in 2022, registered the year-on-year growth rates of approximately 2.16% from 2020 to 2021 and 1.45% from 2021 to 2022. It may be noted in Table 1.1 that, all categories of roads have shown increase in construction of road in 2021 and 2022. The National

Highways saw a steady increase in length from 1,32,995 Km in 2020 to 1,38,376 Km in 2021 and 1,41,344 Km in 2022, with a significant 4.05% growth from 2020 to 2021, followed by a 2.14% increase in 2022. State Highways Expanded from 1,78,749 Km in 2020 to 1,91,609 Km in 2021, a notable 7.19% growth, followed by a smaller 1.11% increase to 1,93,741 Km in 2022. District Roads grew from 6,16,964 Km in 2020 to 6,39,888 Km in 2021 (3.72% growth), and further to 6,52,983 Km in 2022 (2.05% growth), showing consistent development. Rural Roads Showed modest growth from 44,95,948 Km in 2020 to 45,58,425 Km in 2021 (1.39% growth), and 46,09,907 Km in 2022 (1.13% growth). Urban Roads experienced a noticeable 4.91% growth from 5,48,394 Km in 2020 to 5,75,296 Km in 2021, and a modest 1.90% increase in 2022 (5,86,245 Km). Project Roads grew by 2.00% from 2020 to 2021, and by 3.52% in 2022, indicating a steady expansion. Overall, the total road network in India increased from 63,60,004 Km in 2020 to 65,92,801 Km in 2022, highlighting consistent growth in road infrastructure over these years. Notably, rural roads, including JRY roads, constituted 70% of the total road network

in the country in both 2021 and 2022 (Chart 1.1). The detailed information road

network in the country is provided at Table 1.1 and **Annexure 1.1.4 & 2.1.4**.

Table 1.1: Road network as on 31st March – 2021 & 2022 vis-à-vis previous year.

Road Category	2020	2021	% share in Total Road	% change in 2021 over 2020	2022	% share in Total Road	% change in 2022 over 2021
	(In Km)	(In Km)			(In Km)		
National Highways	1,32,995	1,38,376	2.13	4.05	1,41,344	2.14	2.14
State Highways	1,78,749	1,91,609	2.95	7.19	1,93,741	2.94	1.11
District Roads	6,16,964	6,39,888	9.85	3.72	6,52,983	9.90	2.05
Rural Roads (Include JRY Road)	44,95,948	45,58,425	70.15	1.39	46,09,907	69.92	1.13
Urban Road	5,48,394	5,75,296	8.85	4.91	5,86,245	8.89	1.90
Project Road	3,86,954	3,94,690	6.07	2.00	4,08,582	6.20	3.52
Total	63,60,004	64,98,284	100		65,92,801	100	

Chart 1.1: Share of various categories of roads in total road network as on 31st March, (in per cent):

1.6 The table 1.2 provides data on different categories of roads in India from 2015 to 2022 and the noticeable pattern of significant growth in road construction in different categories of roads in the country. The length of National Highways increased 1.44 times from 97,991 Km in 2015 to 1,41,344 Km in 2022. The percentage share of National Highways in the total road network increased from 1.8% in 2015 to 2.14% in 2022. The length of State Highways increased from 1,67,109 Km in 2015 to 1,93,740 Km in 2022. The percentage share of State Highways in the total road network remained relatively stable, around 3% to 3.1%, with a slight decrease to 2.94% in 2022. The length of District Roads decreased from 11,01,178 Km in 2015 to 6,52,983 Km in 2022. The

percentage share of District Roads in the total road network decreased from 20.1% in 2015 to 9.90% in 2022. The length of Rural Roads increased from 33,37,255 Km in 2015 to 46,09,907 Km in 2022. The percentage share of Rural Roads in the total road network increased from 61% in 2015 to 69.92% in 2022. The length of Urban Roads increased from 4,67,106 Km in 2015 to 5,86,245 Km in 2022. The percentage share of Urban Roads in the total road network increased from 8.5% in 2015 to 8.89% in 2022. The length of Project Roads increased from 3,01,505 Km in 2015 to 4,08,582 Km in 2022. The percentage share of Project Roads in the total road network increased from 5.5% in 2015 to 6.20% in 2022. Overall, the total length of all roads registered 1.2 times

increased from 54,72,144 Km in 2015 to 65,92,801 Km in 2022. In order to highlights the growth and changes in the road network in India over the years an analysis of percentage increase in the length of different categories of roads in India from 2015 to 2022 is given below:

- **National Highways:** Increased by approximately 44.3%;
- **State Highways:** Increased by approximately 15.9%;
- **District Roads:** Decreased by approximately 40.7%;
- **Rural Roads:** Increased by

approximately 81.1%;

- **Urban Roads:** Increased by approximately 25.5%;
- **Project Roads:** Increased by approximately 35.5% and
- **All Roads:** Increased by approximately 20.7%.

These figures highlight the significant growth in certain categories, especially Rural Roads, while District Roads saw a notable decrease due to reclassification. Trends in the construction of various categories of roads during the period 2015 to 2020 are given in Chart 1.2.

Table 1.2: Road length by Categories during 2015 to 2022 (as on 31st March)

(In Km)

Category	2015	2016	2017	2018	2019	2020	2021	2022

(*Includes 9 lakh Km of Rural Roads constructed under Jawahar Rozgar Yojana

^ - Included in District Roads,

Since 2016 Other PWD Roads which was part of District Roads have been divided into District Roads and Rural Roads built by State PWD/RWD.

LONG RUN TRENDS IN ROAD LENGTH –CATEGORYWISE:

1.7 The analysis of long-term trends in the length of different categories of roads in India from 1951 to 2022 (Table 1.3) reveals consistent growth in road construction during this period.

- **National Highways:** Increased from 19,811 Km in 1950-51 to 1,41,344 Km in 2021-22. This represents a fold increase of approximately 7.13 times. The percentage share in the total road network decreased from 4.95% in 1950-51 to 2.14% in 2021-22. This indicates a significant increase in the absolute length, but a relative decrease in their share.
- **State Highways:** Grew from 56,765 Km in 1970-71 to 1,93,740 Km in 2021-22. This represents a fold increase of approximately 3.41 times. The construction of State Highways shows mixed trend due to reclassification of SH into other categories. The percentage share decreased from 6.2% in 1970-71 to 2.94% in 2021-22, showing an increase in absolute length but a relative decrease in their share.
- **District Roads:** Increased from 1,73,723 Km in 1950-51 to 6,52,983 Km in 2021-22. This represents a fold increase of approximately 3.76 times. The percentage share decreased from 43.44% in 1950-51 to 9.90% in 2021-22. This category shows a substantial increase in absolute length but a marked decrease in its share.
- **Rural Roads:** Grew from 2,06,408 Km in 1950-51 to 46,09,907 Km in 2021-22. Rural Roads also include 9 lakh Km of road constructed under Jawahar Rozgar Yojana. This represents a fold increase of approximately 22.33 times. The percentage share increased from 51.61% in 1950-51 to 69.92% in 2021-22, indicating a significant increase in both absolute length and relative share.
- **Urban Roads:** Increased from 46,361 Km in 1960-61 to 5,86,245 Km in 2021-22. This represents a fold increase of approximately 12.64 times. The percentage share increased from 8.84% in 1960-61 to 8.89% in 2021-22, showing notable growth in absolute length with a relatively stable share.
- **Project Roads:** Grew from 1,30,893 Km in 1970-71 to 4,08,582 Km in 2021-22. This represents a fold increase of approximately 3.12 times. The percentage share decreased from 14.31% in 1970-71

to 6.20% in 2021-22, showing an increase in absolute length but a decrease in their share.

Overall, the total length of all roads increased from 3,99,942 Km in 1950-51 to 65,92,801 Km in 2021-22, representing a significant expansion of the road network over the years, this represents a 16.49 times increase. These figures highlight the significant expansion of the road network in India over the decades and reflect the focus on improving connectivity and infrastructure across the country. In summary, while the absolute lengths of all categories of roads have

increased significantly from 1951 to 2022, the relative shares of National Highways, State Highways, District Roads, and Project Roads have decreased. In contrast, the relative shares of Rural Roads and Urban Roads have increased, with Rural Roads showing the most substantial growth in both absolute length and relative share. This reflects the focus on improving rural connectivity and urban infrastructure over the decades. Trends in the construction of different categories of roads are given in Chart 1.5 and Chart 1.6.

Chart 1.3: Trends of Decadal Growth of Construction of Road during 1951 to 2021

Chart 1.4: Trends of Construction of Road from 2001 to 2022

Urban Roads

DECADAL ANALYSIS

1.8 The total length of roads in the country has increased consistently from 3.99 lakh Km in 1951 to 65.93 lakh Km in 2022. Decadal CAGRs, are presented in Table 1.4 below.

Table 1.4: CAGR (%) of Road Networks -1951 to 2022

Period	NH	SH & District Road	Rural Road	Urban Road	Project Road	Total
1951/1941	2.7	2.3	4.7	NA	NA	4.2
1961/1951	1.9	4	-0.5	NA	NA	2.7
1971/1961	0.0	2.6	6.0	4.5	NA	5.7
1981/1971	2.9	4.5	5.9	5.5	3.5	5.0
1991/1981	0.6	2.1	7.2	4.3	1.2	4.6
2001/1991	5.5	3.1	4.6	3.0	0.6	3.8
2014/2004	3.4	3.9	4.4	4.3	1.3	4.1
2015/2005	4.1	3.1	3.9	5.0	1.5	3.7
2016/2006	4.3	-2.5	5.5	5.7	2	3.7

table Contd...

table 1.4 Contd...

Period	NH	SH & District Road	Rural Road	Urban Road	Project Road	Total
2017/2007	5.5	-2.6	5.7	5.8	2.0	3.9
2018/2008	6.6	-2.4	6.1	5.8	2.5	4.2
2019/2009	6.5	-3.4	5.6	3.8	2.2	3.5
2020/2010	6.5	-3.5	5.3	3.1	3.3	3.3
2021/2011	6.9	-3.3	5.2	3.4	3.4	3.3
2022/2012	6.3	-3.3	5.0	2.4	3.2	3.1

** Note: Since the year 2015-16 the category Other PWD Road (OPWD) has been discontinued and PWD road, other than SHs, are categorized under District Roads and Rural roads under PWD. Because of this change, the figures in respect of OPWD, District Road & Rural Roads are not comparable with figures of previous years.*

1.9 Comparison of the decadal growth of the road network in India between 1951-1961 and 2012-2022 reveals that National Highways (NH) growth rate increased significantly from 2.7% to 6.3%, State Highways (SH) & District Roads growth rate decreased from 2.3% to -3.3 and Rural Roads growth rate remained strong, with a slight increase from 4.7% to 5.0%. However, the Total Road Network's overall growth rate decreased from 4.2% to 3.1%. Comparing the road network growth in India between 1991-2001 and 2012-2022, the National Highways (NH) growth rate increased from 5.5% to 6.3%, State Highways (SH) & District Roads growth rate decreased significantly from 3.1% to -3.3%, Rural Roads growth rate remained

strong, with a slight increase from 4.6% to 5.0%, Urban Roads growth rate decreased from 3.0% to 2.4%, Project Roads growth rate increased significantly from 0.6% to 3.2% and Total Road Network overall growth rate decreased from 3.8% to 3.1%. This comparison highlights the significant increase in the growth rate of national highways and project roads, while state highways and district roads experienced a decline. The overall growth rate of the total road network has decreased, reflecting changes in infrastructure development priorities for state highways and district roads.

Summary of Key Trends of decadal growth of road network are given below:

- ✓ National Highways (NH) saw significant growth.
- ✓ State Highways (SH) & District Roads experienced a decline.
- ✓ Rural Roads growth remained strong with slight changes.
- ✓ Urban Roads and Total Road Network's growth rates decreased overall.
- ✓ Project Roads showed a substantial increase in growth rate.

1.10 The proactive policy steps, leveraging of private and public investment, innovative financing models, have resulted in increase in the pace of development of National

Highways in recent years. The details of Investment in National Highways are given in Table 1.5. The combined public and private investment has increased during 2013-14 to 2021-22 @ CAGR of 19.57 % (Table 1.5). The total investment in construction of Highways has increased from ₹52,901 crore in 2012-13 to ₹2,21,033 crore in 2021-22. The share of public sector investment in Highways has increased from ₹30,386 crore in 2013-14 to ₹2,01,827 crore in 2021-22 while that of private sector has decreased from ₹22,515 crore in 2013-14 to ₹19,206 crore in 2021-22 (Table 1.5).

Table 1.5: Public and Private Sector Investment in Road Transport (₹ in crore)

Sr. No.	Year	Expenditure		
		Private Investment	Public Investment	Total
1	2013-14	22,515	30,386	52,901
2	2014-15	19,232	30,315	49,547
3	2015-16	29,770	66,370	96,140

- including Internal and Extra Budgetary Resources (IEBR) Target and Private Investment Target

*-including IEBR raised

Chart 1.7: Trends in total Investment in Road Transport

Note-include private investment

1.11 Public expenditure by the Government of India for construction of road in rural as well as urban areas increased consistently since 2013-14 (Chart 1.8). The share of public investment has been increased during the period 2013-14 to 2021-22, while that of private investment has been declined (Chart 1.8). It may be noted that

public expenditure constitutes 91.3% of total investment in road sector in 2022, which was only 57.4% in 2013-14. However, there has been a steady decline in total private investment in road construction, as a result, total share has declined from 42.6% in 2013-14 to 8.7% in 2021-22.

Chart 1.8: Trends in Public and Private Investment in Road Transport

SURFACED ROAD BY ROAD CATEGORIES-(QUALITY)

1.12 The total road constructed in the country during 1950-51 to 2021-22 (Table 1.6) has increased exponentially; subsequently construction of paved/ surfaced road also has increased. The length of paved/ surfaced road rose from 1.57 lakh Km as on 31st March 1951 to 43.21 lakh Km as on 31st March 2022, registering an increase of more than 27 times in seven decades. The

percentage share of length of Surfaced Road to total length has increased from 39.26% as on 31st March, 1951 to 65.55 % as on 31st March, 2022, implies improvements in the quality of public transportation system in the country. Out of total surfaced road length, about 85% length constitutes Bituminous and Cement Concrete roads (**Annexure 1.2**) in 2022 and the remaining 15% is Water Bound Macadam roads.

Table 1.6: Surfaced and Total Road as of 31st March

Year	Surfaced Road (Km)	Total Road(Km)	% of surfaced road
1951	1,57,019	3,99,942	39.26
1961	2,63,052	5,24,478	50.16
1971	3,97,948	9,14,979	43.49
1981	6,83,676	1,4,85,421	46.03
1991	10,90,167	23,27,362	46.84
2001	16,01,745	33,73,520	47.48
2002	16,61,555	34,26,600	48.49
2003	17,01,258	35,28,654	48.21
2004	17,60,768	36,21,507	48.62
2005	17,95,298	38,09,156	47.13
2006	18,58,684	38,80,651	47.9
2007	19,44,758	40,16,401	48.42
2008	20,36,063	41,09,592	49.54
2009	23,24,504	44,71,510	51.98

**Excluding JRY road*

STATE/UT WISE DISTRIBUTION OF TOTAL ROAD AND SURFACED ROAD

1.15 State/UT wise distribution of total road construction (excluding JRY roads) depicts, as of 31st March 2022, Maharashtra accounted for the largest share (10.98%) with 6,25,023 Km in total length followed by Uttar Pradesh (8.86%) with 5,04,468 Km, Assam (8.80%) with 5,01,203 Km, Karnataka (6.86%) with

3,90,772 Km and Madhya Pradesh (6.60%) with 3,75,863 Km. (**Annexure 2.1.3**). These five States with the largest road networks accounted for a combined share of about 42 % of road length in India. Details of State/UT wise distribution of total road length is at **Annexure 1.1.3 & 2.1.3** and the State wise distribution of construction of total road and surfaced road is presented in Chart 1.11.

Chart 1.11: State/UT wise break-up of Total Road and surfaced road as of 31st March

1.16 State/UT wise break-up of surfaced road presented in the **Annexure 2.1.3** of the report which shows Maharashtra top amongst the States with 4,69,655 Km (11.35%) followed by Uttar Pradesh with 4,34,202 Km (10.49%), Madhya Pradesh with 3,29,567 Km (7.96%), Rajasthan with 2,52,561 (6.10%) and Gujarat with 2,36,867 (5.72 %) as of 31st March 2022. These five States with the largest road surfaced networks accounted for a combined share of about 41.63 % of surfaced road length in India.

1.17 As on 31st March, 2022, about 72.70% of total roads (excluding JRY) in the country are surfaced. Amongst the major States, Punjab has the highest per cent of surfaced road in total roads i.e. 91.94% (Chart 1.11) followed by Gujarat (88.49%), Rajasthan (88.22%), Madhya Pradesh (87.68%), Uttar Pradesh (86.07%), Haryana (84.72 %) and Tamil Nadu (83.69%). Assam (26.24%), Nagaland (50.63%), Meghalaya (51.12%), etc. are at the bottom level. 66.87 % of States/UTs are having more than 72.70 % (All India Average) Surfaced Road.

Chart 1.12: Per cent share of Surfaced Road to Total Road Length across State/UTs as of 31st March, 2021 & 2022:

1.18 Share of Surfaced Road to Total Road is the lowest in Assam i.e. only 26.2%. For other North Eastern States, more than fifty

per cent of roads are surfaced as of 31st March, 2022.

Table 1.8: Total Road and Surfaced Road in North Eastern States as of 31st March:

NE States	2021			2022		
	Total Road (in Km)	Surfaced (in Km)	Surfaced as % of Total Road	Total Road (in Km)	Surfaced (in Km)	Surfaced as % of Total Road
Arunachal Pradesh	53,073	37,745	71.12	53,073	37,745	71.12
Assam	4,75,238	1,19,162	25.07	5,01,203	1,31,501	26.24

Tripura	28,218	21,924	77.7	28,579	22,294	78.01

INDICATORS OF ROAD**INFRASTRUCTURE**

1.19 Road density of country, is defined as average road length per 1000 Km, depicting an increasing trend since 2011-

12 (Table 1.9). This indicates an improvement of the quality and strength of public transportation system in the country.

Table 1.9: Trends in Road Density

Indicators	2011-12	2012-13	2013-14	2014-15	2015-16	2016-17	2017-18	2018-19	2019-20	2020-21	2021-22
All India Road Density											
Per 1000 Km ²	1,422.63	1,479.98	1,591.47	1,664.55	1,704.44	1,793.99	1,890.75	1,926.02	1,934.62	1976.68	2005.43
Per 1000 Population	3.86	4.02	4.32	4.52	4.63	4.87	5.13	5.23	5.25	4.77	4.79
Urban Road Density											
Per 1000 Km ²	4,026.12	4,540.68	4,364.10	4,568.18	4,985.04	5,148.88	5,223.78	5,296.30	5,363.16	5626.25	5733.33
Per 1000 Population	1.09	1.23	1.18	1.24	1.35	1.4	1.42	1.44	1.45	1.23	1.23
Rural Road Density											
Per 1000 Km ²	886.61	915.12	1,018.75	1,076.02	1,268.86	1,343.53	1,421.77	1,458.10	1,449.62	1469.76	1486.36
Per 1000 Population	3.3	3.41	3.79	4	4.72	5	5.29	5.42	5.39	5.1	5.14

Note: Population and area is as per 2011 census and road length is as on 31/3/2020

1.20 Road density/availability has increased from 1,422.63 per 1000 Sq. Km in 2011-12 to 2005.43 (including JRY Roads) per 1000 Sq. Km in 2021-22, registered a growth of about 41% corresponding to same period in 2011-12. For Rural area, it has increased from 886.61 per 1000 Sq. Km 2011-12 to 1486.36 (including JRY Roads) per 1000 Sq. in 2021-22 and for the urban area it increased from 4,026.12 per 1000 Sq. Km to 5733.33 per 1000 Sq. Km respectively for the same period. Similarly, availability of roads per 1000

population is increasing over the years as shown in Table 1.9, where it has increased from 3.86 per 1000 population in 2011-12 to 4.79 per 1000 population in 2021-22. There is corresponding increase in the availability of roads in rural and urban area. It is worthwhile to note that density of road per 1000 population increased significantly in rural area is due to the impact of PMGSY and other schemes of Government of India initiated specifically for development of rural roads network (Chart 1.13).

Chart 1.13: Road Density per 1000 Sq. Km

Chart 1.14: Road Density in Km per 1000 Population

ROAD DENSITY ACROSS STATE/UTs

1.21 Higher road density values generally indicate a more extensive and accessible road network. This can be beneficial in primarily in improving connectivity. A denser road network often means better connectivity between different parts of the region, which can enhance transportation efficiency and reduce travel time. This improved road connectivity leads to better road infrastructure facilitating trade and commerce, leading to economic growth. Further result in improved access to essential services such as healthcare, education, and employment opportunities. State wise distribution of road density per 1000 Sq. Km as on 31st March, 2022 is at **Annexure 2.7.9b** indicates the variation in road density across different states and categories of roads, reflecting the infrastructure development and connectivity in these regions. Chandigarh's road density (26260.26 Km per 1000 Sq. Km) stands out be highest followed by Delhi (12033.11 Km per 1000 Sq. Km), Puducherry (11,431.48 Km per 1000 Sq.

Km), Lakshadweep (7,425.00 Km per 1000 Sq. Km) and Kerala (6,693.00 Km per 1000 Sq. Km). Similarly, with respect to NH density presented in the **Annexure 2.7.9b**, Daman & Diu (198.20 Km per 1000 Sq.Km) has highest NH density followed by Chandigarh (131.58 Km per 1000 Sq.Km), Puducherry (130.61 Km per 1000 Sq.Km), Delhi (105.87 Km per 1000 Sq. Km), Nagaland (100.73 Km per 1000 Sq. Km), Sikkim (99.92 Km per 1000 Sq. Km) and Punjab (84.17 Km per 1000 Sq. Km). The availability of roads per 1000 Sq. Km is comparably higher in Union Territories. State Highways density amongst all States/UTs, Chandigarh (2880.00 Km per 1000 Sq.Km) has highest SH density followed by, Daman & Diu (198.20 Km per 1000 Sq.Km), Arunachal Pradesh (161.21 Km per 1000 Sq.Km), Karnataka (145.37 Km per 1000 Sq.Km) and Uttarakhand (107.93 Km per 1000 Sq.Km) (**Annexure 2.7.9b**). The Category wise distribution of Road Density per 1000 Sq. Km. for Top Five States/UTs is presented in the Table 1.10.

Table 1.10: The Category wise Road Density per 1000 Sq. Km. for Top Five States/UTs as on 31st March, 2022

Sl. No.	National Highways	State Highways	District Roads	Rural Roads	Urban Roads	Project Roads
1	Daman & Diu (198.20)	Chandigarh (2880.00)	Chandigarh (1214.47)	Lakshadweep (7280.33)	Chandigarh (21,794.30)	Assam (362.40)
2	Chandigarh (131.58)	Daman & Diu (198.20)	Delhi (933.06)	Assam (5794.43)	Delhi (10,682.88)	Delhi (275.30)
3	Puducherry (130.61)	Arunachal Pradesh (161.21)	Puducherry (740.37)	Puducherry (5164.21)	Puducherry (5320.75)	Punjab (264.32)
4	Delhi (105.87)	Karnataka (145.37)	Kerala (654.25)	Kerala (4890.36)	West Bengal (1072.42)	Kerala (253.50)
5	Nagaland (100.73)	Uttarakhand (107.93)	Haryana (589.43)	Goa (4355.42)	Daman & Diu (898.29)	Gujarat (221.63)

**Excludes JRY Roads*

1.22 Amongst North Eastern States, Assam with (6389.79 Km) has the highest Road density followed by Tripura (2725.49 Km) and Nagaland (2296.96 Km). However, Nagaland has the largest National highway

density (100.73 Km) followed Sikkim (99.92 Km) and Manipur (82.41 Km). In comparison to other road categories in NE States density of rural road network has relatively better indicators.

Table 1.11: The Category wise Road Density per 1000 Sq. Km. for North Eastern States as on 31st March, 2022

North East States	National Highways	State Highways	District Roads	Rural Roads	Urban Roads	Project Roads	Total Road Density
Assam	51.98	32.38	55.83	5794.43	92.77	362.4	6389.79
Tripura	81.44	100.80	43.96	2258.71	104.51	136.06	2725.49
Nagaland	100.73	39.21	309.38	1704.94	77.61	65.10	2296.96
Meghalaya	51.54	36.05	207.83	2079.21	28.93	26.09	2429.65
Sikkim	99.92	94.31	212.58	1204.95	13.69	154.82	1780.26
Manipur	82.41	34.97	138.64	1149.45	10.58	52.27	1468.32
Mizoram	67.50	12.41	98.88	683.74	19.77	61.88	944.19
Arunachal Pradesh	30.30	161.21	112.66	273.55	1.30	54.94	633.76

**Excludes JRY Roads*

1.23 Amongst States, Arunachal Pradesh has the highest road length per 1000 population with 34.28 Km per 1000 population followed by Sikkim with 18.50 Km per 1000 population and

Nagaland with 17.21 Km per 1000 population (**Annexure 2.7.9c**). Category wise distribution of Road Length per 1000 population for Top Five States is depicted in the Table 1.12.

Table 1.12: Category Wise Road Length per 1000 Population for Top Five States as on 31st March, 2022

Sl. No.	National Highways	State Highways	District Roads	Rural Roads	Urban Roads	Project Roads
1	Arunachal Pradesh (1.64)	Arunachal Pradesh - (8.72)	Arunachal Pradesh (6.09)	Arunachal Pradesh (14.79)	Chandigarh (2.04)	Arunachal Pradesh (2.97)
2	Mizoram (1.16)	Sikkim (0.98)	Nagaland (2.32)	Meghalaya (14.06)	Puducherry (1.62)	Sikkim (1.61)
3	Sikkim (1.04)	Andaman & Nicobar (0.65)	Sikkim (2.21)	Assam (12.85)	West Bengal (0.97)	Jammu & Kashmir (1.39)
4	Andaman & Nicobar (0.82)	Uttarakhand (0.50)	Mizoram (1.70)	Nagaland (12.77)	Kerala (0.81)	Mizoram (1.06)
5	Nagaland (0.75)	Karnataka (0.41)	Jammu and Kashmir (1.60)	Sikkim (12.52)	Delhi (0.76)	Himachal Pradesh (1.01)

**Excludes JRY Roads*

QUALITY

1.24 The road transport sector in India has expanded manifold in more than seventy years after independence, both in terms of spread (total road length & road density) and capacity (No. of registered vehicles on road and the volume of passenger and freight traffic handled). The total road length has increased from 4.0 lakh Km. as on 31.03.1951 to about 65.92 lakh Km as on 31.03.2022. The total length of National

Highways has increased from 19,811 Km to 1,41,344 Km increase of more than 7 times during the same period (Table 1.3). The expansion of India's road network is the corner stone of transformative changes, driving the nation's progress across multiple dimensions,

1.25 Road Density may be considered as an indicator of accessibility of road per thousand Km, which has increased not

only for All India but for Rural and Urban areas as well (Table 1.9). The total road density per 1000 sq.Km has increased from 1,422.63 in 2011 to 2005.43 in 2022. Correspondingly, Rural and Urban road density has increased (Table 1.9). Similarly, road density per 1000 population increased from 3.86 in 2011 to 4.79 in 2022.

1.26 In essence, the expansion of India's road network is the corner stone of transformative changes, driving the nation's progress across multiple dimensions, such as:

a. Economic Growth

- **Boost to Commerce:** Improved road connectivity facilitates the movement of goods and services, thus enhancing trade and commerce.
- **Employment Opportunities:** Construction and maintenance of roads generate employment opportunities, contributing to economic development.
- **Industrial Growth:** Better road infrastructure supports industrial activities by providing efficient transportation for raw materials and finished goods.

b. Social Benefits

- **Accessibility to Services:** Improved road networks ensure better access to essential services such as healthcare, education, and markets, particularly in rural areas.

- **Reduction in Travel Time:** Enhanced road connectivity reduces travel time, making it easier for people to commute and access different regions.
- **Quality of Life:** By improving access to services and opportunities, road development contributes to an overall better quality of life.

c. Regional Development

- **Urbanization:** Road development can lead to the growth of urban areas by connecting them with rural regions, promoting balanced regional development.
- **Tourism:** Better road infrastructure can boost tourism by making tourist destinations more accessible.

d. Environmental and Safety Improvements

- **Sustainable Practices:** Modern road construction often incorporates sustainable practices, such as using recycled materials and designing eco-friendly pathways.
- **Safety:** Improved roads are generally safer, reducing the number of accidents and fatalities.

e. National Integration

- **Connectivity:** A robust road network helps in integrating various regions of the country, fostering national unity and cohesion.

A blue arrow graphic pointing to the right, with a gradient from dark blue on the left to light blue on the right. It has a shadow effect.

Section - 2

SECTION - 2

NATIONAL HIGHWAYS

2.1 National Highways (NH) play a crucial role in India's road transport sector. NHs facilitates the efficient movement of goods and passengers, connecting major industrial centres, ports, and markets. This connectivity boosts trade and commerce, contributing significantly to the country's economic development. NHs provides arterial road network linking state capitals, major cities, and remote areas, enhancing accessibility and reducing travel time. This improved connectivity supports tourism, business, and overall social integration. The construction and maintenance of NHs have seen substantial growth. For instance, the length of NHs increased from 91,287 Km in 2014 to 1,38,376 Km as on 31st March, 2021 and 1,41,344 Km as on 31st March, 2022. This expansion has led to better infrastructure and smoother travel experiences. Though National Highways constitute about 2.14 % of the Road Network of the country in 2022, these NHs carry nearly one third of total traffic on road. Efforts are being made to enhance the quality of NH construction and maintenance. Innovations such as bio-bitumen-based roads are being implemented to promote sustainability and reduce reliance on fossil fuels. These initiatives align with global sustainability goals and support India's vision for a self-reliant, sustainable future. Overall, NHs is vital for India's economic and social

development, providing a backbone for the country's road transport network.

2.2 The Ministry of Road Transport and Highways (MORTH) is mandated with the construction, development and maintenance of the National Highways (NH). The Ministry is progressing towards provision of improved service access to citizens with quality and efficiency in service delivery, transparency in the system and reduced workload for RTO staff. MORTH implements National Highways projects/flagship schemes through the agency of National Highways Authority of India Ltd (NHAI), National Highways Infrastructure Development Corporation Ltd. (NHIDCL), State PWDs (2 lane NH) & Border Roads Organization etc. Ministry is also responsible for administration of National Highways Act, 1956, National Highways Authority of India Act, 1988, National Highways Fee (Determination of Rates and Collection) Rules, 2008, Motor Vehicles Act. 1988 and Central Motor Vehicles Rules 1989, formulation of broad policies relating to road transport, environmental issues, automotive norms etc. besides arrangements for movement of vehicular traffic with neighbouring countries.

2.3 At present, projects of widening to 4-lane NH configurations or more and Expressways under Bharatmala Pariyojna

(Phase-I) and other Schemes have been assigned to the NHAI. The projects of development to 2-lane NH configurations, with or without paved shoulders are primarily being assigned to the State Governments, viz. State PWDs, State Road Construction Departments/ Corporations, etc. The Projects under Special Accelerated Road Development Programme for North-Eastern Region (SARDP-NE), including Arunachal Pradesh Package of Roads, are primarily assigned to NHIDCL. Further, NHIDCL is also being assigned projects under other Schemes in hill States including States in the North East Region, the three hill States in North-West Region and the Andaman & Nicobar Islands.

NATIONAL HIGHWAYS – PROFILE OF 2021 & 2022

2. 4 India's road network (including highways) is one of the most extensive road networks in the world with 65.92 lakh kilometre as on 31st March 2022. With the proactive policy

initiatives in the sector, the road network has continuously been expanding in the country. The total road network consists of about 1.41 lakh Km of National Highways, 1.94 lakh Km of State Highways and 62.57 lakh Km of Other Roads (which include District Roads, Rural Roads, Urban Roads and Project Roads). In percentage term, National Highways, State Highways and Other Roads constitute 2.14%, 2.94% and 94.92% respectively in total road network. The total length of National Highways has increased from 1,32,995 Km in 2020 to 1,38,376 Km in 2021 and 1,41,344 Km in 2022, recorded an increase of 4.05% change in 2021 over 2020 & 2.14% change in 2022 over 2021 (Table 2.1). For the this period 2020-2022, National Highways in the country are fully surfaced (Table 2.1 and Chart 2.1). Major programmes initiated by MoRTH for development of National Highways network in the country is given at Section 8 of this report.

Table 2.1: National Highways 2021 vis-à-vis 2020 & 2022 vis-à-vis 2021

National Highways network	As on March, 2020 (Km)	As on March, 2021 (Km)	As on March, 2022 (Km)
Total Length (NH)	1,32,995	1,38,376	1,41,344
% Share in Total Road	2.09	2.13	2.14
Surfaced NH	1,32,995	1,38,376	1,41,344
% Share of Surfaced Road	100	100	100
% change in 2021 over 2020	4.05		
% change in 2022 over 2021	2.14		

Data source: Planning Division, MoRTH

Chart 2.1: National Highways and Total Surfaced National Highways

NATIONAL HIGHWAYS NETWORK

2.5 There has been a consistent increase in the construction of National Highways/roads since 1950-51, increasing from 19,811 Km of roads in 1950-51 to 1,41,344 Km of roads in 2021-22, i.e. recorded more than seven times increase in 71 years. The proactive policy interventions of Ministry of Road Transport and Highways on development of National Highways constitutes among the major possible factors responsible for widening NHs

network in the country. The total length of National Highways as on 31.03.2021 was 1,38,376 Km, and as on 31.03.2022 was 1,41,344 Km. So, registered the year-on-year growth rates are approximately 4.04% from 2019-20 to 2020-21 & 2.15% from 2020-21 to 2021-22. However, percentage share of National Highways in the total road network has been declined from 4.95% in 1950-51 to 2.14% in 2021-22 (Table 2.2).

Table 2.2: National Highways Network (1950-51 to 2021-22)

Year	National Highways* (in Km)	Total Road Length# (in Km)	% share of NH in total road network
1950-51	19,811	3,99,942	4.95
1960-61	23,798	5,24,478	4.54
1970-71	23,838	9,14,979	2.61
1980-81	31,671	14,85,421	2.13
1990-91	33,650	23,27,362	1.45
2000-01	57,737	33,73,520	1.71
2010-11	70,934	46,76,838	1.52
2015-16	1,01,011	56,03,293	1.80
2016-17	1,14,158	58,97,671	1.94
2017-18	1,26,350	62,15,797	2.03
2018-19	1,32,499	63,31,757	2.09
2019-20	1,32,995	63,60,004	2.09
2020-21	1,38,376	64,98,284	2.13
2021-22	1,41,344	65,92,801	2.14

Chart 2.3: Trend of Length of NH from 2010 to 2022

NH Include Expressways

2.6 The National Highway Authority of India (NHAI) was set up as a Special Vehicle in 1997 for the development of highways in the country through National Highways Development Programme (NHDP). Further, NHDP has been implemented through 7 phases from 1998 to 2017 with target of construction of 55,000 Km of roads. As a result of this innovative programme, National Highways network in the country has entered in to a new era of strengthening and enlarging quality of public transportation system. Since 2000-01, there has been consistent increase in the construction of National Highways. Bharatmala Pariyojana the new umbrella programme for highways sector contributed to bridge the critical infrastructural gaps in the road sector.

AWARD / CONSTRUCTION OF NATIONAL HIGHWAYS

2.7 The year wise details on Award and construction of National Highways are presented in Table 2.3. The data portray the trends in the awarded length and constructed length of National Highways (NHs) and road projects in India over the

period from 2016-17 to 2021-22. Trend since 2019-20 on Awarded Length of NHs/Road Projects shows a recovery of pace in awarding the road projects in NH, in 2020-21 recorded a 22.5% rise and in 2021-22 a 16.1% increase over previous year. Length Constructed of NHs/Road Projects in 2020-21 recorded significant increase to 13,327 Km, a 30.2% rise compared to 2019-20 (10,237 Km), whereas, Length Constructed in 2021-22 recoded a Drop to 10,457 Km, a -21.5% decrease. The awarded length shows variability over the years, with a significant drop in 2018-19. However, there is a consistent recovery and growth trend in the following years. The Road Constructed per Day registered a significant increase to 13,327 Km, a 30.2% rise in 2021-22 in comparison with 2019-20 (10,237 Km), but in the subsequent period 2021-22 NH length constructed Drop to 10,457 Km, a -21.5% decrease. The constructed length follows a destabilised trend, with a notable increase in 2020-21. The decrease in 2021-22 suggests potential challenges or delays in project execution.

Table 2.3: Award of NHs/Road Projects and Construction of NHs/ Road Projects

Item	2016-17	2017-18	2018-19	2019-20	2020-21	2021-22
Awarded Length (Km)	15,948	17,055	5,494	8,948	10,964	12,731
% change over previous period	57.93		-67.8	62.9	22.5	16.1
Length Constructed (Km)	8,231	9,829	10,855	10,237	13,327	10,457
% change over previous period	35.8		10.4	-5.7	30.2	-21.5
Road Constructed per day (Km)	22.55	26.92	29.73	28.04	36.51	28.65

Data source: Planning Division, MoRTH

FUND ALLOCATION AND EXPENDITURE

2.8 Details of fund allocated and expenditure incurred for Development and Maintenance of National Highways during FY 2012-13 to 2021-22 is present in the Table 2.4. There has been significant upturn in road construction expenditure, is a reflection of the impetus given by the

Government of India to critical sector that generates employment and supports infrastructure. Total investment in the Roads and Highway sector has gone up more than two times in the seven years period from FY15 to FY 22 (Table 2.4), which also led to increased road density across the states.

Table 2.4 Fund Allocation and Expenditure for Development and Maintenance of National Highways (Rs. in Crore)

Amount in ₹ Crore									
Year	Allocation [#]		Expenditure						Allocation as % of Expenditure
	Allocation	YoY Growth	Private	YoY Growth	Public*	YoY Growth	Total	YoY Growth	
2015-16	1,16,132	114.43%	29,770	54.79%	66,370	118.93%	96,140	94.04%	82.79%

Chart 2.4: Fund Allocation and Expenditure for construction of National Highways

Chart 2.5: Public and Private Expenditure for construction of National Highways

2.9 Chart 2.6 reveals share of public investment in road sector has been increasing during the period 2015-16 to 2021-22, whereas that of private sector has been declining. Similarly, private

investment's share to total investment has drastically declined to 8.7% in 2021-22 from 31% in 2015-16, whereas during the same period, share of public investment increased to 91% from 69%.

Chart 2.6: Private and Public Investment in Total Investment (in %)

NATIONAL HIGHWAYS NETWORK: STATE/UTWISE BREAK-UP

2.10 State/UT's share of National Highways amongst other factors depends on the geographical area. Top 5 States shares 41.13% of total National Highways network in the country during 2021-22. Maharashtra has the highest NH network in 2021-22 with 18,317 (12.96%)

followed by Uttar Pradesh and Rajasthan with 12,216 Km (8.64%) and 10,477 Km (7.41%) respectively (Table 2.5 and Chart 2.7). Madhya Pradesh with 8,911 Km (6.30%) and Andhra Pradesh 8,207Km (5.81%) rank fourth and fifth respectively. The State/UT wise break-up of length of National Highways is at **Annexure 2.2.1**.

Analysis of the development of National Highways (NH) in India, as detailed in this section, highlights several takeaways:

Key Trends:

- **Expansion:** The length of NHs increased from 91,287 Km in 2014 to 1,41,344 Km as of 31st March 2022. This expansion indicates a significant focus on improving road infrastructure.
- **Traffic Load:** Despite constituting only 2.14% of the total road network, NHs carry nearly one-third of the total traffic. This underscores their importance in the country's transportation system.
- **Quality Improvements:** Efforts are being made to enhance the quality of NH construction and maintenance, including the use of bio-bitumen-based roads to promote sustainability.
- **Funding and Investment:** There has been a significant increase in fund allocation and expenditure for NH development, reflecting the government's commitment to infrastructure growth.
- **Regional Distribution:** Arterial road network of NH spread across all states and UTs. Maharashtra has the highest NH

network, followed by Uttar Pradesh and Rajasthan.

Inferences:

- **Economic Impact:** The expansion and improvement of NHs facilitated the efficient movement of goods and passengers, boosting trade and commerce.
- **Sustainability:** The use of sustainable practices in road construction aligned with global sustainability goals and supports India's vision for a self-reliant future.
- **Regional Development:** The focus on NH development in various states promotes balanced regional development and enhanced connectivity between urban and rural areas.
- **Safety and Accessibility:** Improved NHs contributed to safer travel and better accessibility to essential services, thereby improving the overall quality of life.

These trends and inferences highlight the critical role of NHs in India's economic and social development, providing a backbone for the country's road transport network.

Section - 3

SECTION - 3

STATE HIGHWAYS

3.1 State Highways are constructed and managed by State Governments through the State Public Works Departments. The State Highways are usually roads that link important cities, towns and district headquarters, tourist places, minor ports and connect them with National Highways or State Highways of neighbouring states. State Highways together with major district roads contribute the secondary system of road transportation in the country. Improving the state highway system can significantly enhance connectivity and economic development. State Highways are contributing to overall better transportation infrastructure in the country by improving the efficiency, safety, and sustainability of state highways.

3.2 Total State Highways constructed was 1,91,608 Km as on 31st March 2021, which constitute 2.95% of total road network in the country and 99.43% (1,90,520 Km) of SHs are surfaced (Table 3.1). The growth rates for both total length and surfaced SH were quite substantial from March 2020 to March 2021 recording Year-on-Year growth rate of 7.21%. Total State Highways cloaked a smaller yet consistent growth (YoY of 1.11%) from March 2021 to March 2022 and as on 31st March 2022 constructed was 1,93,741 Km, which constitute 2.94% of total road network in the country and 99.42% (1,92,621 Km) of SHs are surfaced (Table 3.1).

Table 3.1: State Highways in 2021 vis-à-vis 2020 and 2022 vis-à-vis 2021

Item	As on March, 2020 (Km)	As on March, 2021 (Km)	As on March, 2022 (Km)
Total Length of SH	1,78,749	1,91,608	1,93,741
% Share in Total Road	2.81	2.95	2.94
Surfaced SH	1,77,710	1,90,520	1,92,621
% Share of Surfaced SH in total SH	99.42	99.43	99.42
% change in 2021 over 2020		7.19	
% change in 2022 over 2021			1.11

Chart 3.1: Total and Surfaced State Highways

STATE HIGHWAYS NETWORK

3.3 Prior to 1970, State Highways were added in Districts Roads. There has been a consistent increase in the construction of State Highways/roads since 1970-71,

increasing from 56,765 Km of roads in 1950-51 to 1,93,741 Km of roads in 2021-22, i.e. recorded increase of more than 3.41 times in 71 years.

Table 3.2: State Highways Network

Year	Length in Km	% Share in Total Roads
1970-71	56,765	6.2
1980-81	94,359	6.4
1990-91	1,27,311	5.5
2000-01	1,32,100	3.9
2010-11	1,63,898	3.5
2014-15	1,67,109	3.1
2015-16	1,76,166	3.1
2016-17	1,75,036	3.0
2017-18	1,86,908	3.0
2018-19	1,79,535	2.8
2019-20	1,78,749	2.8
2020-21	1,91,608	3.0
2021-22	1,93,741	2.9

Chart 3.2: Trends of construction of State Highways from 2010 to 2022

STATE/UT WISE DISTRIBUTION OF STATE HIGHWAYS

3.4 Out of 1,93,741 Km of State Highways constructed in 2022, 1,92,621 Km (99.42%) of SH were surfaced. Majority of the States have fully surfaced State Highways (Chart 3.3). Maharashtra has the highest share of State Highways network in the country i.e. 16.77% (32,486 Km)

followed by Karnataka 14.39% (27,881 Km), Rajasthan 8.74% (16,942 Km), Gujarat 8.41% (16,292 Km), and Andhra Pradesh 6.97% (13,500 Km). These five States accounted for about 55.28 % of the total length of SHs in the country. State/UT-wise break-up of State Highways is given in the following table 3.3.

Table 3.3: State wise break up of State Highways and Surfaced SH as on 31st March, 2022

S. No.	Name of State / UT	Total length of SH (in Km)	Share in Total SH(%)	Surfaced SH(in Km)	% of Surfaced SH in total SH
1	Andhra Pradesh	13,500	6.97	13,500	100
2	Arunachal Pradesh	13,500	6.97	13,500	100
3	Assam	2,540	1.31	2,452	96.54

TOTAL		1,93,741	100	1,92,621	99.42

Chart 3.3: State/UT wise break up of total and surfaced State Highways as on 31st March, 2022

3.5 Out of total length of State Highways roads (1,93,741Kms) as on 31st March, 2022, about 99.42 % of SH roads (1,92,621 Kms) were surfaced (**Annexure 2.3.2**). Out of total length of surfaced State Highways, Bituminous Top (BT) and Cement Concrete (CC) roads accounted for about 99.08% and the remaining 0.92% was Water Bound Macadam (WBM) roads. The State/UT-wise break up of length of State Highways in India by type of surface is given in the **Annexure 2.3.2**.

3.6 North Eastern States share 10.46% (20,268 Km) of total States Highways network in the country as on 31st March, 2022. In North East, 98.97% (20,060 Km) of States Highways are surfaced in 2022. Assam has largest State Highways network (2,540 Km) followed by Tripura (1,057 Km) and Meghalaya (809 Km).

Table 3.4: State Highways in North Eastern States as on 31.03.2022.

Sl.No	Name of State / UT	Total Length of SH (Km)	% Share in Total SH	Surfaced SH(Km)	% of surfaced SH

Note: \$ Figure for Arunachal Pradesh pertain to roads under State PWD. Arunachal Pradesh has not yet made official classification of State Roads into State Highways, Major District Roads (MDR) and Other District Roads (ODR).

Chart 3.4: Share of North Eastern States SH as on 31.03.2022.

3.7 The recent steady growth in the State Highways (SH) network in India has resulted in several beneficial effects to the economy, such as:

- **Improved Connectivity:** Increased length of SH enhanced connectivity between cities, towns, and rural areas, making it easier for people and goods to move across the state and beyond.
- **Economic Growth:** Better road infrastructure supported local businesses by reducing transportation costs and time. It boosted trade and commerce, leading to overall economic growth in the region.
- **Tourism Development:** Enhanced road connectivity to tourist destinations attracted more visitors, boosting the local tourism industry and generating additional revenue for the state.
- **Reduced Congestion:** Expanding the SH network alleviated traffic congestion on existing roads, leading to smoother and faster travel for commuters.
- **Safety Improvements:** Well-maintained and surfaced roads reduced the risk of accidents and improve overall road safety

for drivers, passengers, and pedestrians.

- **Job Creation:** Road construction and maintenance projects created direct, indirect and induced employment opportunities for local communities, contributed to socio-economic development.
- **Better Access to Services:** Improved road networks provided better access to essential services such as healthcare, education, and emergency services, enhancing the quality of life for residents.
- **Environmental Benefits:** With proper planning, new roads designed to minimize environmental impact, such as reducing emissions from idling vehicles in traffic jams, and integrating green technologies.
- **Inter-State Connectivity:** Enhanced SH networks facilitated better connectivity with neighbouring states, fostering regional cooperation and development.
- **Resilience to Disasters:** Well-constructed and maintained roads were more resilient to natural disasters, ensuring quicker recovery and restoration of normalcy after events like floods or earthquakes.

Section - 4

SECTION - 4

DISTRICT ROADS

4.1 District Roads are the strength of Rural Economy, these are key roads within a district, which connects Taluk headquarters and major rural areas to District headquarters. District Roads are constructed & maintained by Public Works Department of States and UTs. District Roads along with the State Highways, account for the secondary system of road transportation in the country. District Roads comprised of Major District Roads (MDRs) and Other District Roads (ODRs) which provide connection between District

and Taluk headquarters with the State Highways and National Highways. These roads which run within districts contribute significantly to the economy and country's industrial development by connecting areas of production with markets and enabling movement of raw materials and finished products. As per the classification of roads broadly the MDRs are to have a minimum width of 15 metres with traffic density of less than 10,000 PCUs but more than 5,000 PCUs.

PROFILE AND TREND OF DISTRICTS ROADS

4.2 The total district road constructed was 6,52,983Km as on 31st March 2022, of which surfaced roads constitute about 96.18% of total district road network (i.e. 6,28,038 Km). There has been consistent increase in the construction of District Roads till 2014-15, thereafter, it declined to 5,61,940 Km in 2015-16. However, total length constructed has taken upturn since 2016-17. The year 2021 & 2022 registered an increase in construction of districts roads compared to 2020, road construction has increased from 6,16,964 Km in 2019-20 to 6,39,888 Km in 2020-21 and 6,52,983 Km in 2021-22. Thus

registered an Year-over-Year (YoY) Growth from 2019-20 to 2020-21 of 3.71% and YoY Growth from 2020-21 to 2021-22 of 2.05%. However, percentage share of District Roads in total road length has been on decline since 1960-61 (Table 4.1). District Roads shared about 43.4% and 49.0% of total road network in the country respectively during 1950-51 and 1960-61 (Table 4.1) and in 2022 it was 9.90%. The declining share of District Roads is due to Other PWD Roads which was part of District Roads have been divided into District Roads and Rural Roads built by State PWD/RWD. State wise details are presented at **Annexure 2.4.1**.

Table 4.1: Districts Roads network

Year	Length(Km)	% Share in Total Roads
1950-51	1,73,723	43.4
1960-61	2,57,125	49.0
1970-71	2,76,833	30.3
1980-81	4,21,895	28.4
1990-91	5,09,435	21.9
2000-01	7,36,001	21.8
2010-11	9,98,895	21.4
2014-15	11,01,178	20.1
2015-16	5,61,940	10.0
2016-17	5,86,181	9.9
2017-18	6,11,268	9.8
2018-19	6,12,778	9.7
2019-20	6,16,964	9.7
2020-21	6,39,888	9.8
2021-22	6,52,983	9.9

Chart 4.1: Construction of District Roads- (2001 to 2022)

Note: The declining share of District Roads from the year 2015-16 is due to the Other PWD Roads which was part of District Roads have been merged in Rural Roads built by State PWD/RWD.

STATE/UT WISE DISTRIBUTION OF DISTRICTROADS

4.4 The total length of District Roads as on 31st March, 2022 was 6,52,983Km. State-wise distribution of total Districts Roads and surfaced District Roads are presented in Table 4.2. For the year in 2021-22, Maharashtra topped the States in the total length of District Roads in the country with

1,11,076 Km (17.01%) followed Uttar Pradesh 62,141 Km (9.52%), Karnataka 56,166 Km (8.60%) , Tamil Nadu 52,677 Km (8.07 %) and Madhya Pradesh 50,714 Km(7.77%)(Chart 4.2). These five States together account for 50.96 % of the total length of District Roads in India. The details of State/UT-wise length of District Roads as on 31.03.2022 are at **Annexure 2.4.1.**

Table 4.2: State wise distribution of District Road on 31st March, 2022

Total & Surfaced Length of District Roads (State/UT-Wise)

37	Puducherry	363	363	100
All India		6,52,983	6,28,038	96.18

Notes: The District Roads comprise Major District Roads & Other District Roads constructed and maintained by State PWD/ Roads & Bridges Depts.

@ Arunachal Pradesh has not yet made official classification of State Roads into State Highways, Major District Roads (MDR) and Other District Roads (ODR)

Differences in sum on account of rounding off of decimals.

Data as on 31.03.2018

4.5 State-wise distribution of type of surface of District Roads indicates that about 96.18% of the total District Roads are surfaced as of 31st March, 2022. Out of the

total surfaced District Roads length of 6,28,038 Km, Bituminous Top (BT) and Cement Concrete (CC) roads together accounted for about 95.52% and the

remaining 4.48% are Water Bound Macadam (WBM) roads. Chart 4.2 depicts that most of the States have surfaced district roads. The State/UT-wise break up of length of District Roads by type of surface is at **Annexure 2.4.2**.

4.6 In respect of surfaced district road length seen in Chart 4.2, again Maharashtra topped the States with 1,02,317 Km followed by Uttar Pradesh (62,141 Km), Karnataka (55,050 Km), Tamil Nadu (52,677 Km) and Madhya Pradesh (50,714 Km). These five States together account for about 51.41% of the total surfaced

District Roads in the country. In majority of the States, Districts Roads are fully surfaced. In Maharashtra, about 92.11% of District Roads are surfaced where as in Karnataka this is about 98.01%. In States of Uttar Pradesh, Madhya Pradesh, Tamil Nadu, Kerala, Haryana, Jharkhand, Bihar, Punjab and Tripura districts roads are fully surfaced. In Union Territories also districts roads are fully surfaced. North Eastern States like Sikkim (57.33 %), Arunachal Pradesh (57.76%) and Nagaland (56.79%) are at the bottom in respect of surfaced district roads.

Chart 4.2: State/UT-wise break-up of District Roads as on 31.03.2022

Note: Arunachal Pradesh has not classified PWD roads into State Highways, District Roads and Other Roads. The length of PWD roads in the State have been reflected under State Highways.

Analysis of the trend of district roads in India portrays some key points:

- **Total Length:** The total length of district roads as of 31st March, 2022, was 6,52,983 Km accounting for almost 10% of total road length. This includes both Major District Roads (MDRs) and Other District Roads (ODRs).
- **Surface Quality:** A significant majority (96.18%) of these roads are surfaced.
- **Historical Trends:** There was a consistent increase in the construction of district roads until 2014-15, followed by a decline in 2015-16. However, the construction picked up again from 2016-17 onwards.
- **Recent Growth:** The years 2021 and 2022 saw an increase in the construction of district roads compared to 2020. Specifically, the road construction increased from 6,16,964 Km in 2019-20 to 6,39,888 Km in 2020-21, and further to 6,52,983 Km in 2021-22.
- **Percentage Share:** The percentage share of district roads in the total road network has been declining since 1960-61. In 1950-51, district roads accounted for 43.4% of

the total road network, which increased to 49.0% in 1960-61. However, by 2022, this share had decreased to 9.90%.

Inferences:

- **Economic Impact:** The increase in the construction of district roads in recent years suggests a focus on improving district connectivity and supporting the local economy.
- **Infrastructure Development:** The high percentage of surfaced roads indicates significant investment in improving the quality of district roads.
- **Policy Shifts:** The decline in the percentage share of district roads in the total road network could be due to the reclassification of roads and the construction of new rural roads by state Public Works Departments (PWDs) and Rural Works Departments (RWDs).

These trends highlight the importance of district roads in connecting rural areas to district headquarters and major highways, thereby facilitating economic activities and development.

A blue arrow graphic pointing to the right, with a gradient from dark blue on the left to light blue on the right. It has a white outline and a subtle drop shadow.

Section - 5

SECTION - 5

RURAL ROADS

5.1 Rural roads in India are absolutely critical. They serve as vital lifelines for rural communities, connecting them to essential services, markets, and opportunities. Good rural roads facilitate the transportation of agricultural products to markets, helping farmers get better prices for their produce and stimulating local economies. Better roads mean easier access to schools for children in rural areas, which can significantly impact their educational outcomes. Construction and maintenance of rural roads create job opportunities for local populations, contributing to livelihood improvement. In India, Rural Roads consists of roads built and constructed by Panchayati Raj Institutions, (Zila Parishad, Panchayat Samiti, Gram

Panchayat), Pradhan Mantri Gram Sadak Yojana (PMGSY) and State PWDs. Thus, Rural Roads though defined as low traffic volume roads are a key component of rural development, since it promotes access to economic and social services, thereby generating increased agricultural productivity, non-agriculture employment as well as non-agricultural productivity, which in turn expands rural growth opportunities and real income through which poverty can be reduced. The Pradhan Mantri Gram Sadak Yojana (PMGSY) is a significant government initiative aimed at enhancing rural road infrastructure in India. It has transformed the connectivity landscape, making a big difference in the lives of millions.

RURAL ROADS IN INDIA

5.2 India has rural road network (including JRY Roads) of 45,58,425 Km and 46,09,907 Km as on 31st March 2021 & 2022, respectively (**Annexure 1.1.4 & 2.1.4**). Rural Roads constitute around 70% of total road network in the country as of 31st March, 2021 & 2022 (Table 1.1). So, rural roads registered the Year-Over-Year (YoY) growth from 2019-20 to 2020-21 of approximately 1.39%, and YoY of approximately 1.13% from 2020-21 to 2021-22. Length of Rural Road excluding JRY road has increased from 35,95,948 Km in 2019-20 to 36,58,425 Km in 2020-21, registered growth of 1.74% and further increased to 37,09,907 Km in 2021-22, registered growth of 1.41% relative to same period last year (Table 5.1 and Chart 5.1).

5.3 The total rural road (excluding JRY road) constructed as on 31st March, 2021 was at 36,58,425 Km of which 24,80,278 Km are

surfaced road (67.80 %) and as on 31st March, 2022 it was at 37,09,907 Km of which 25,13,060 Km are surfaced road (67.74%). The unsurfaced rural road shares 77.10% of total unsurfaced roads and surfaced rural road shares 60.94% of total surfaced roads in the country as on 31st, March 2021 (Table 5.1). Out of the total surfaced rural road, Bituminous Top (BT) and Cement Concrete (CC) roads together accounted for about 87.82% (21,78,062 Km) and the remaining 12.18% (3,02,217) are Water Bound Macadam (WBM) roads. The unsurfaced rural road shares 77% of total unsurfaced roads and surfaced rural road shares 60.72% of total surfaced roads in the country as on 31st, March 2022 (Table 5.1). Out of the total surfaced rural road, Bituminous Top (BT) and Cement Concrete (CC) roads together accounted for about 87.83% (22,07,208 Km) and the remaining 12.17% (3,05,852) are Water Bound Macadam (WBM) roads. Details are given at **Annexure 1.1.2 & 2.1.2**.

Table 5.1: Profile of Rural Road in 2021 vis-à-vis 2020 & 2022 vis-à-vis 2021

Category	Length as on 31 st , March (in Km)			% change in 2021 over 2020	% change in 2022 over 2021
	2020	2021	2022		
Total Rural Road(excluding JRY)	35,95,948	36,58,425	37,09,907	1.74	1.41
Total Road(excluding JRY)	54,60,004	55,98,284	56,92,801	2.53	1.69
% share in Total Road	65.86	65.35	65.17		
Total Surfaced Rural Road(excluding JRY)	24,33,780	24,80,278	25,13,060	1.91	1.32
Total Surfaced Road (excluding JRY)	39,46,246	40,70,190	41,38,472	3.14	1.68
% share in total surfaced road	61.67	60.94	60.72		
Total Un-surfaced Rural Road(excluding JRY)	11,62,168	11,78,147	11,96,847	1.37	1.59
Total Un-surfaced Road (excluding JRY)	15,13,758	15,28,094	15,54,329	0.95	1.72
% share in total un-surfaced road	76.77	77.1	77		

Chart 5.1: Rural Road network in 2020, 2021 & 2022

(Excluding JRY Roads)

RURAL ROAD NETWORK

5.4. Despite some marginal fluctuations, there has been a clear increase in construction of rural roads since 1950-51 (Table 5.2). Subsequently, its percentage share in total road has been consistently increased during the period 1950-51 to 2021-22. Rural Road constructed has increased

from 2.06 lakh Km in 1950-51 to 46.10 lakh Km in 2021-22, recorded almost 22 times increase in 71 years (Chart 5.2). There has been significant increase in the construction of Rural Road since 1990-91. Rural Road constitutes 69.92% of country's total road network in 2021-22.

Table 5.2: Rural Roads Network

Year	Length (Km)	% Share in Total Roads
1950-51	2,06,408	51.61
1960-61	1,97,194	37.6
1970-71	3,54,530	38.75
1980-81	6,28,865	42.34
1990-91	12,60,430	54.16
2000-01	19,72,016	58.46
2010-11	27,49,804	58.8
2014-15	33,37,255	60.99
2015-16	39,35,337	70.23
2016-17	41,66,916	70.65
2017-18	44,09,582	70.94
2018-19	45,22,228	71.42
2019-20	44,95,948	70.69
2020-21	45,58,425	70.15
2021-22	46,09,907	69.92

Chart 5.2: Trends in the construction of Rural Roads from 2010 to 2022

COMPONENTS OF RURAL ROADS

5.5 Rural Roads consisted of roads built and constructed by Panchayati Raj Institutions, (Zilla Parishad, Panchayat Samiti, Gram Panchayat), Pradhan Mantri Gram Sadak Yojana (PMGSY) and State PWDs. Details are given at **Annexures 1.5.2 to 1.5.4**. The total length of Rural Road (excluding JRY road) as on 31st March, 2021 is at 36,58,425 Km, out of which, 7,98,690 Km (21.83%) of PMGSY Roads have been constructed by the National Rural Infrastructure Development Agency (NRIDA) of Ministry of Rural Development (**Annexure 1.5.2**), 8,35,068 Km (22.83%) of road built by the State PWD/RWD Departments (**Annexure 1.5.3**), 20,24,668 Km (55.34%) of Panchayat Raj Roads have been built by the States/UT Panchayati Raj Departments (**Annexure**

1.5.4) and the remaining 9 lakhs Km of roads were constructed under the erstwhile Jawahar Rozgar Yojana (JRY) Scheme as of 31st March, 2021 (Table 5.3 & Chart 5.3). In comparison, the total length of Rural Road (excluding JRY road) as on 31st March, 2022 is at 37,09,907 Km, out of which, 7,98,690 Km (21.53%) of PMGSY Roads have been constructed by the National Rural Infrastructure Development Agency (NRIDA) of Ministry of Rural Development (**annexure 2.5.2**), 8,52,702 Km (22.98%) of road built by the State PWD/RWD Departments (**Annexure 2.5.3**), 20,58,514 Km (55.49%) of Panchayat Raj Roads have been built by the States/UT Panchayati Raj Departments (**Annexure 2.5.4**) and the remaining 9 lakhs Km of road was constructed under the erstwhile Jawahar Rozgar Yojana (JRY) Scheme as of 31st March, 2022.

Table 5.3: Components wise profile of Rural Road as on 31st March, 2022

Components	Total (Km)	Surfaced (Km)	% of surfaced road
PMGSY Roads	7,98,690	6,53,254	81.79
State PWD/RWD Roads	8,52,702	7,04,789	82.65
Panchayat Raj Roads	20,58,514	11,55,017	56.11
Rural Roads(excluding JRY)	37,09,907	25,13,060	67.74

Chart 5.3: Component wise profile of Rural Roads as on 31st March, 2022

5.6 A comparison of rural roads in India for the years 2021 and 2022, in terms of the length of rural roads reveals that PWD/RWD Roads increased from 8,35,068 Km in 2021 to 8,52,702 Km in 2022, marking a 2.11% increase; Panchayati Raj Roads went from 20,24,668 Km in 2021 to 20,58,514 Km in 2022, indicating a 1.67% rise and Total Rural Roads (excluding JRY) extended from 36,58,425 Km in 2021 to 37,09,907 Km in 2022, representing a 1.41% growth. Concomitantly, the percentage share of these rural road types under PMGSY Roads saw a slight decrease in their share from 21.83% in 2021 to 21.53% in 2022; PWD/RWD Roads experienced a small increase in their share

from 22.83% in 2021 to 22.98% in 2022; Panchayati Raj Roads' share increased from 55.34% in 2021 to 55.49% in 2022 and total Rural Roads (excluding JRY) share decreased from 65.35% in 2021 to 65.17% in 2022. Overall, while there is steady growth in the length of rural roads across different categories, the percentage share of PMGSY roads showed a minor decline, whereas the percentage share of PWD/ RWD and Panchayati Raj Roads slightly increased. This overview gives a picture of the infrastructure development in rural areas of India over the two years, reflecting ongoing efforts to enhance connectivity and accessibility.

Table 5.4: Components wise profile of Rural Road in 2022 vis-à-vis 2021

Components	Length of Rural road as on 31 st , March (Km)		
	2021	2022	% change in 2022 over 2021
PMGSY Roads	7,98,690	7,98,690	0
% share	21.83	21.53	
PWD/RWD Roads	8,35,068	8,52,702	2.11
% share	22.83	22.98	
Panchayati Raj Roads	20,24,668	20,58,514	1.67
% share	55.34	55.49	
Rural Roads* (excluding JRY) TR 5692801 (2022)	36,58,425	37,09,907	1.41
% share in total road (excluding JRY)	65.35	65.17	

5.7 For the years 2021 and 2022 surfaced rural roads in India in terms of the length of surfaced roads under **PMGSY Roads** remained constant at 6,53,254 Km in both 2021 and 2022; **PWD/RWD Roads** increased from 6,83,826 Km in 2021 to 7,04,789 Km in 2022, indicating a 3.07% rise ; **Panchayati Raj Roads** extended from 11,43,199 Km in 2021 to 11,55,017 Km in 2022, marking a 1.03% increase and **Rural Roads (excluding JRY)** grew from 24,80,278 Km in 2021 to 25,13,060 Km in 2022, showing a 1.32% growth. Further, examining the percentage share of these surfaced rural roads types reveals that PMGSY Roads saw a slight decrease in their share from 26.34% in 2021 to 25.99% in 2022; PWD/RWD Roads experienced

an increase in their share from 27.57% in 2021 to 28.05% in 2022; Panchayati Raj Roads' share decreased marginally from 46.09% in 2021 to 45.96% in 2022 and total Rural Roads (excluding JRY) share in total surfaced roads was slightly decreased from 60.94% in 2021 to 60.72% in 2022. Overall, the data indicates that while there is growth in the length of surfaced rural roads across different categories, there have been slight shifts in the percentage shares. The PWD/RWD Roads showed the highest percentage increase in both length and share, indicating significant efforts in this category. Meanwhile, PMGSY and Panchayati Raj Roads experienced minor decreases in their percentage share, but still saw overall growth in length. These

recent trends in growth of surfaced rural roads for the years 2021 and 2022 indicate commensurate increase in road infrastructure development in rural areas

in line with country's developmental goals.

Category wise profile of Rural Road as on 31st March, 2022 is presented at Table 5.6.

Table 5.5: Components wise profile of Surfaced Rural Road in 2022 vis-à-vis 2021

Components	Surfaced Rural Road as on 31 st , March (Km)		
	2021	2022	% change in 2022 over 2021
PMGSY Roads	6,53,254	6,53,254	0
% share	26.34	25.99	
PWD/RWD Roads	6,83,826	7,04,789	3.07
% share	27.57	28.05	
Panchayati Raj Roads	11,43,199	11,55,017	1.03
% share	46.09	45.96	
Rural Roads* (excluding JRY)	24,80,278	25,13,060	1.32
% share in total surfaced (excluding JRY)	60.94	60.72	

Table 5.6: Components wise Profile of Rural Road as on 31st March, 2022

Components	Total Length	WBM/WMM	BT/CC	Total Surfaced	Un-surfaced
PMGSY Roads	7,98,690	27,151	6,26,103	6,53,254	1,45,436
% share	21.53	8.88	28.37	25.99	12.15

% share	22.98	21.28	28.98	28.05	12.36
Panchayati Raj Roads	20,58,514	2,13,622	9,41,395	11,55,017	9,03,497
% share	55.49	69.84	42.65	45.96	75.49
Rural Roads (excluding JRY)	37,09,907	3,05,852	22,07,208	25,13,060	11,96,847

RURAL ROADS - STATE/UT WISE DISTRIBUTION

5.8 The State/UT-wise break-up of length of Rural Road is presented at Table 5.7. Surfaced Rural Road (including JRY) constitutes 58.49% of total rural road network in the country as on 31st March, 2022. Assam (Table 5.7) accounted for the largest share of Rural Roads with 4,54,504 Km (12.25%) followed by Maharashtra 4,06,143 Km with (10.95%), Uttar Pradesh 3,04,526 Km (8.21%), Bihar 2,60,171 Km (7.01%) and Madhya Pradesh 2,33,817 Km (6.30%). These five States account for about 44.72 % of the total length of Rural Roads in the country (Excluding JRY). The State/UT-wise break-up of Rural Road is at **Annexure 2.5.1**

5. 9 In States/UTs of Uttar Pradesh, Punjab, Delhi, Puducherry and A & N Islands more than 90 % of Rural Roads are surfaced (Table 5.7). Among states in Delhi all rural roads are surfaced roads. Whereas, Karnataka, Meghalaya, Nagaland, Ladakh and Assam more than half of the rural roads are un-surfaced. Assam is largest in respect of total length of rural road in the country, however lies at the bottom in respect of surfaced rural roads (25.15%) followed by Ladakh (33.74 %), Nagaland (42.98%), Meghalaya (45.18%) and Karnataka (47.13%). In UTs like Dadra & Nagar Haveli, and Daman & Diu, Lakshadweep and Chandigarh cent per cent roads are surfaced. The State/UT-wise break-up of Rural Road is at **Annexure 2.5.1**.

Table 5.7: State wise distribution of Rural Road on 31st March, 2022

Total & Surfaced Length of Rural Roads (State/UT-wise) (in Km)				
S. No.	Name of State/UT	Total	Surfaced	% of Surfaced Rural Road
1	Andhra Pradesh	1,02,009	53,419	52.37
2	Arunachal Pradesh	22,891	12,712	55.53
3	Assam	4,54,504	1,14,302	25.15
4	Bihar	2,60,171	2,00,503	77.07
5	Chhattisgarh	62,574	46,450	74.23

35	Ladakh	243	82	33.74
36	Lakshadweep	218	218	100
37	Puducherry	2,530	2,311	91.34
Total (Excluding JRY Roads)		37,09,907	25,13,060	67.74
Total (Including JRY Roads)		46,09,907	26,96,262	58.49

Chart 5.4 - The State/UT-wise break-up of Rural Roads as on 31st March, 2022.

5.10 In respect of total surfaced rural road as seen in Chart 5.4, again Maharashtra topped amongst the States with 2,82,824 Km of road followed by Uttar Pradesh (2,77,609 Km), Madhya Pradesh (2,09,713 Km), Bihar (2,00,503 Km) and Odisha (1,55,872 Km). In Maharashtra, 69.64% of rural roads are surfaced where as in Uttar Pradesh 91.16% & Madhya Pradesh 89.69% of rural roads is surfaced. In Odisha only 68.39% and Bihar 77.07% of rural roads are surfaced in. North Eastern States like Assam (25.15%), Arunachal Pradesh (55.53%), Meghalaya (45.18%) and Nagaland (42.98%) are at the bottom in respect of surfaced rural roads.

5.11 The development of rural roads in India, as detailed in the section, highlights several vital indications about rural infrastructure development.

Key Trends:

- **Expansion:** The length of rural roads increased from 45,58,425 Km in 2021 to 46,09,907 Km in 2022. This growth indicates a steady focus on improving rural connectivity.
- **Surface Quality:** A significant portion of rural roads are surfaced. As of March 31, 2022, 67.74% of rural roads were surfaced.
- **Components:** Rural roads are constructed by various entities, including Panchayati

Raj Institutions, the Pradhan Mantri Gram Sadak Yojana (PMGSY), and State Public Works Departments (PWDs).

- **Regional Distribution:** Assam has the largest share of rural roads, followed by Maharashtra and Uttar Pradesh.

Inferences:

- **Economic Impact:** The expansion and improvement of rural roads facilitated the transportation of agricultural products to markets, helping farmers get better prices for their produce and stimulating local economies.
- **Infrastructure Development:** The high percentage of surfaced roads indicated significant investment in improving the quality of rural roads.
- **Policy Shifts:** The consistent growth in the length of rural roads reflected tangible efforts to enhance connectivity and accessibility in rural areas.
- **Regional Development:** The focus on rural road development in various states promoted balanced regional development and enhanced connectivity between urban and rural areas.

These trends and inferences highlight the unenviable role of rural roads in India's economic and social development, providing essential connectivity for rural communities.

A blue arrow graphic pointing to the right, with a gradient from dark blue on the left to light blue on the right. It has a shadow effect.

Section - 6

SECTION - 6

URBAN ROADS

6.1 Urban Roads consist of Municipal Roads under Urban Development Departments of States and UTs, roads in Railway Zones,

MES roads constructed by Military Engineering Services (MES) and Major and Minor Port Roads.

Details on categories of Urban Road are presented at **Annexures 6.1 to 6.5**.

6.2 As of 31st March 2021, the total length of Urban Roads was 5,75,296 Km, with surfaced roads constituting about 81.27% (4,67,534 Km) of the total, increasing to 5,86,245 Km by 31st March 2022, with surfaced roads making up 81.54% (4,78,015 Km); the construction of Urban Roads increased from 5,48,394 Km in 2019-20 to 5,75,296 Km in 2020-21, registering a growth of 4.91%, and further to 5,86,245 Km in 2021-22, marking a growth of 1.90%, with Urban Roads sharing about 8.85% of the total road network in the country in 2021 and increasing to 8.89% by 2022. During the period total length of urban roads has been

steadily increasing each year and percentage of surfaced roads remains relatively stable but the growth rate of urban road construction has decreased over the years. It was 4.91% from 2019-20 to 2020-21, but dropped to 1.90% from 2020-21 to 2021-22. This could suggest that while new roads are still being constructed, the rate of expansion is slowing down. Urban roads' share in the total road network in India has slightly increased, from 8.85% in 2021 to 8.89% in 2022 indicating a growing emphasis on urban road development. (Table 6.1 and Chart 6.1).

6.3 The total length of surfaced urban road increased from 4,67,534 Km in 2020-21 to 4,78,015 Km in 2021-22, registering an increase of 2.24% in 2022 corresponding to same period in 2021. This increase of surfaced urban road indicates pace of development and maintenance efforts. Around 81% of total urban roads in the country are surfaced road reflects a significant focus on improving road quality and infrastructure. Urban road constitutes 11% of total surfaced road and

4.80% (1,08,230 Km) of total un-surfaced road in the country as on 31st, March 2022 (Table 6.1). Out of the total surfaced urban road in 2022, Bituminous Top (BT) and Cement Concrete (CC) roads together accounted for 90.62% (4,33,189 Km) and the remaining 9.57% (44,826 Km) are Water Bound Macadam (WBM) roads (**Annexure 1.1.2 & 2.1.2**), illustrating a preference for more durable and long-lasting road materials.

Table 6.1: Urban Road network in 2022 vis-à-vis 2021

Category	Length as on 31 st March (Km)		% change in 2022 over 2021
	2021	2022	
Total Urban Road	5,75,296	5,86,245	1.90
Total Road (include JRY)	64,98,284	65,92,801	1.45
% share in Total Road	8.85	8.89	
Total Surfaced Urban Road	4,67,534	4,78,015	2.24
Total Road surfaced (include JRY)	42,53,392	43,21,674	1.61
% share in total surfaced road	10.99	11.06	
Total un-surfaced Urban Road	1,07,761	1,08,230	0.44
Total Road un-surfaced (include JRY)	22,44,892	22,71,127	1.17
% share in total un-surfaced road	4.8	4.77	

Chart 6.1: Urban Road Network

TRENDS OF URBAN ROAD

6.4 There has been a consistent increase in the length of urban roads over six decades, growing from 46,361 Km in 1960-61 to 5,86,245 Km in 2021-22 (Table 6.2 and Chart 6.2). This is testimony to significant infrastructure development and expansion in urban areas. However, the percentage share of urban roads in the total road network has varied over time, starting at 8.84% in 1960-61, dropping to a lower percentage in some decades, and peaking again at 9.10% in 2015-16. Recent years show a somewhat stable share around

8.85% to 8.89%. These fluctuations suggest phases of rapid urbanization versus periods of more extensive overall road network expansion. The construction of Urban Road has increased from 46 thousand Km in 1960-61 to 586 thousand Km in 2021-22, marked an almost 13 times increase (Chart 6.2). Thus, there is noticeable positive trend in the expansion of urban roads, with a stable share of urban roads in the total network in recent years, highlighting the renewed commitment to urban development.

Table 6.2: Trend of Urban Roads: 1960-61 to 2021-22

Category	Urban Roads (Km)	% Share to Total Roads
1960-61	46,361	8.84
1970-71	72,120	7.88
1980-81	1,23,120	8.29
1990-91	1,86,799	8.03
2000-01	2,52,001	7.47
2010-11	4,11,679	8.80
2014-15	4,67,106	8.54
2015-16	5,09,730	9.10
2016-17	5,26,483	8.93
2017-18	5,34,142	8.59
2018-19	5,41,554	8.55
2019-20	5,48,394	8.62
2020-21	5,75,296	8.85
2021-22	5,86,245	8.89

Chart 6.2: Trend in construction of Urban Roads from 2010 to 2022

CATEGORY WISE DISTRIBUTION OF URBAN ROADS

- 6.5 Urban Roads consist of Municipal Roads under Urban Development Departments of States/UTs, roads in Railway Zones, MES roads constructed by Military Engineering Services (MES) and Major and Minor Port Roads. Details on categories of Urban Road are presented at **Annexures 1.6.1 to 1.6.5 & 2.6.1 to 2.6.5..**
- 6.6 The total length of Urban Road as on 31st March, 2021 was at 5,75,296 Km, out of which, 5,42,264 Km (94.26%) has constructed by Municipalities (**Annexure 1.6.2**), 18,140 Km built by Military Engineering Services (**Annexure 1.6.3**), 729 Km built by Major Ports (**Annexure 1.6.4**), 927 Km constructed by Minor Port (**Annexure 1.6.5**), and the remaining 13,236 Km constructed by Railways (**Annexure 1.6.6**).
- 6.7 The analysis of category-wise profile of urban roads as of 31st March 2022 reveals that municipal roads making up the majority (94.35%) at 5,53,118 Km. The surfaced roads account for 4,78,015 Km,

while un-surfaced roads are 1,08,230 Km. The trend indicates that a significant portion of urban roads are surfaced, with municipal roads being the predominant category. The percentage share of surfaced roads is high across all categories, reflecting a focus on improving road infrastructure in urban areas. There was an addition of approximately 10,949 Km of urban road length from 2021 to 2022, highlighting on going infrastructure development. Both years show that municipal roads constitute the majority of urban roads, with a slight increase in their proportion from 94.26% in 2021 to 94.35% in 2022. By 2022, a significant portion of urban roads (approximately 81.54%) were surfaced, indicating a focused effort to improve road quality and durability. Overall, these trends suggest a strong emphasis on enhancing road infrastructure, particularly through the construction of surfaced roads by municipalities, contributing to better urban connectivity and road quality.

Table 6.3: Category wise profile of Urban Road as on 31st March, 2022

Category	Total Length(Km)	WBM/WMM	BT/CC	Total Surfaced	Un-surfaced
Municipal Roads	5,53,118	42,046	4,03,943	4,45,989	1,07,129
% share	94.35	93.80	93.25	93.30	98.98
MES Roads	18,139	1,365	16,661	18,026	113
% share	3.09	3.05	3.85	3.77	0.10
Major Port Roads	740	44	646	690	50
% share	0.13	0.10	0.15	0.14	0.05
Minor Port Roads	927	66	802	868	59
% share	0.16	0.15	0.19	0.18	0.05
Railway Roads	13,321	1,306	11,136	12,442	879
% share	2.27	2.91	2.57	2.60	0.81
Urban Roads	5,86,245	44,826	4,33,189	4,78,015	1,08,230

STATE/UT-WISE DETAILS OF URBAN ROADS

6.8 The State/UT-wise break-up of Urban Roads (**Annexure 2.6.1**) shows, in 2022, West Bengal accounted for the largest share with 95,180 Km (16.24%) followed by Uttar Pradesh with 71,602 Km with (12.21%), Rajasthan 45,961 Km with (7.84%), Karnataka 45,150 Km with (7.70%), Madhya Pradesh 35,698 Km with (6.09%). These five States account for 50% of the total length of urban Roads in the country.

6.9 In respect of surfaced urban road length as seen in Table 6.4, again same set of States topped the list. West Bengal accounted for

the largest share of surfaced urban road in 2022 with 66,844 Km (%) followed by Uttar Pradesh with 56,236 Km (%), Rajasthan 38,628 Km (%), Karnataka 33,139 Km(%) and. Madhya Pradesh 30,207 Km(%)

6.10 The Union Territories of Chandigarh, Dadra & Nagar Haveli, Daman & Diu, and Lakshadweep have achieved a remarkable 100% surfaced urban roads. Telangana leads among the states with 99.98% of its urban roads surfaced, followed by Delhi at 99.62% and Tamil Nadu at 95.05%. Among the North-Eastern states, Tripura has 98.95% of its urban roads surfaced, followed by Meghalaya at 98.96%, Arunachal Pradesh at 98.16%, Mizoram at

96.24%, and Sikkim at 94.91%. These states and Union Territories have shown excellent performance in maintaining and

surfacing their urban roads, contributing to better infrastructure and connectivity.

Table 6.4: State/UT-wise distribution of Urban Roads as on 31st March, 2022

S. No.	Name of State/UT	Total	Surfaced	% age of Surfaced Road
1	Andhra Pradesh	25,641	22,537	87.90
2	Arunachal Pradesh	109	107	98.16
3	Assam	7,277	4,502	61.87
4	Bihar	14,622	10,216	69.87
5	Chhattisgarh	13,846	12,282	88.71
6	Goa	916	817	89.14
7	Gujarat	32,777	28,133	85.83
8	Haryana	15,910	15,036	94.50
9	Himachal Pradesh	2,423	1,776	73.31
10	Jharkhand	8,091	5,756	71.14
11	Karnataka	45,150	33,139	73.40
12	Kerala	28,859	24,891	86.25
13	Madhya Pradesh	35,698	30,207	84.62
14	Maharashtra	30,459	23,821	78.21
15	Manipur	236	181	76.64
16	Meghalaya	649	642	98.96
17	Mizoram	417	401	96.24
18	Nagaland	1,287	1,191	92.54
19	Odisha	19,426	15,943	82.07
20	Punjab	19,745	18,148	91.91
21	Rajasthan	45,961	38,628	84.05

Urban Roads in India Total		5,86,245	4,78,015	81.54

Chart 6.3 State/UT wise distribution of Length of Urban Roads as on March 31st, 2022.

6.11 The analysis of data on urban roads reveals a handful of noticeable trends:

Key Trends:

- **Growth in Urban Roads:** The total length of urban roads increased from 5,75,296 Km in 2021 to 5,86,245 Km in 2022, marking a growth of 1.90%. This indicates a steady focus on urban infrastructure development.
- **Surfaced Roads:** About 81.54% of urban roads were surfaced by 2022, showing a slight increase from 81.27% in 2021. This reflects consistent efforts to improve road quality and durability of urban roads.
- **Municipal Roads Dominance:** Municipal roads make up the majority of urban roads, accounting for 94.35% of the total urban road length in 2022.
- **Category-wise Distribution:** Urban roads are categorized into municipal roads, railway zone roads, MES roads, and port roads. Municipal roads are the predominant category, followed by MES roads, major port roads, minor port roads, and railway roads.

Inferences:

- **Infrastructure Development:** The consistent increase in the length of urban roads highlights significant infrastructure development in urban areas. The focus on surfaced roads indicates efforts to enhance

road quality and durability.

- **Economic Impact:** Improved urban roads facilitate better connectivity and transportation, contributing to economic growth by enabling efficient movement of goods and people.
- **Regional Development:** The focus on urban road development in various states promotes balanced regional development and improved connectivity between urban and rural areas.

State-wise Highlights:

- **Top States:** West Bengal, Uttar Pradesh, Rajasthan, Karnataka, and Madhya Pradesh account for 50% of the total length of urban roads in the country.
- **High Surfaced Road Percentage:** Union Territories like Chandigarh, Dadra & Nagar Haveli, Daman & Diu, and Lakshadweep have achieved 100% surfaced urban roads. Among states, Telangana leads with 99.98% of its urban roads surfaced, followed by Delhi at 99.62% and Tamil Nadu at 95.05%.

In essence it is worth reinstating the critical role of urban roads in India's infrastructure development, providing essential connectivity and supporting decentralised economic growth.

A blue arrow graphic pointing to the right, with a gradient from dark blue on the left to light blue on the right. It has a white outline and a subtle drop shadow.

Section - 7

SECTION - 7

PROJECT ROADS

7.1 Project Roads mainly consist of roads built/coming under the purview of Central and State Government agencies and departments. Roads under this category include roads of Forest Departments, Irrigation Departments, Electricity Departments, roads in coal fields and coal

mines of Coal India Ltd., roads under the plant areas of Steel Authority of India Limited (SAIL), National Mineral Development Corporation (NMDC), and Sugarcane Departments of States/UT and Border Roads Organisation (BRO).

Details on categories of Project Road are presented at **Annexures 1.7.1 to 1.7.8 & 2.7.1 to 2.7.8..**

7.2 The Total length of Project Roads as on 31st March, 2021 was at 3, 94,690 Km, of which surfaced road constitute about 45.33% (1,78,925 Km) of total Projects Roads. Construction of Project Road has

increased from 3, 86,954 Km in 2019-20 to 3,94,690 Km in 2020-21, registered a growth of about 2% on an average over previous period (Table 7.1). Project Road shares 6.07 % of total road network in the

country as on 31st March, 2021. Where as in 31st March, 2022 Total length of Project Roads was increased to 4,08,582 Km, of which surfaced road constitute about 45.37% (1,85,394Km) of total Projects Roads and registered a year-on-year growth of about 3.52%.

7.3 The total length of Project Road as on 31st March, 2021 is at 3,94,690 Km, of which surfaced road constitute about 45.33% (1,78,925 Km). Total Surfaced Project Road constitutes 4.21% of total surfaced road in the country (Table 7.1). Out of the total surfaced Project Road, Bituminous Top (BT) and Cement Concrete (CC) roads together accounted for 59.98 % (1,09,455 Km) and the remaining 40.02 % (69,471 Km) were Water Bound Macadam (WBM) roads (**Annexure 1.1.2**). However, Un-Surfaced Project Road share 9.61% (2,15,765 Km) of un-surfaced road in the country as on 31st, March 2020 (Table 7.1). (**Annexure 1.1.2**).

7.4 The table 7.1 compares the profile of project roads in 2021 and 2022 and it

reveals the following key points:

- **Total Project Road Length** increased from 3,94,690 Km in 2021 to 4,08,582 Km in 2022, registered a YoY of 3.52%.
- **Total Surfaced Project Road:** Increased from 1,78,925 Km in 2021 to 1,85,394 Km in 2022, registered a YoY of 3.62%.
- **Total Un-surfaced Project Road:** Increased from 2,15,765 Km in 2021 to 2,23,188 Km in 2022, registered a YoY of 3.44%.

The increase in total project road length from 3,94,690 Km in 2021 to 4,08,582 Km in 2022 indicates significant efforts by Central and State Government agencies and departments to expand and improve road infrastructure for their tailor made purposes. The rise in surfaced project roads from 1,78,925 Km in 2021 to 1,85,394 Km in 2022 suggests targeted improvements in roads managed by various departments such as Forest, Irrigation, and Electricity, enhancing connectivity and accessibility for these sectors.

Table 7.1: Profile of Project Road in 2022 vis-à-vis 2021

Category	Length as on 31 st , March (Km)		% change over previous year
	2021	2022	
Total Project Road	3,94,690	4,08,582	3.52
Total Road(include JRY)	64,98,284	65,92,801	1.45
% share in Total Road	6.07	6.2	
Total Surfaced Project Road	1,78,925	1,85,394	3.62
Total Road surfaced (include JRY)	42,53,392	43,21,674	1.61
% share in total surfaced road	4.21	4.29	
Total un-surfaced Project Road	2,15,765	2,23,188	3.44
Total Road un-surfaced (include JRY)	22,44,892	22,71,127	1.17
% share in total un-surfaced road	9.61	9.83	

7.5 The construction of Project Roads has increased during the period 1970-71 to 2017-18, however shown marginal decrease during 2018-19 (Table 7.2) but again in 2019-20, Project Road showed an increase. Project Road shares 6.20 % of

total roads network in the country in 2021-22. The total length of Project Roads has increased from 1,30,893 Km as on 31.03.1971 to 4,08,582 Km as on 31.03.2022, registering three times increase (Table 7.2).

Table 7.2: Project Roads Network

Category	Projects Roads	% Share in Total Roads
1970-71	1,30,893	14.3
1980-81	1,85,511	12.5
1990-91	2,09,737	9
2000-01	2,23,665	6.6
2010-11	2,81,628	6
2014-15	3,01,505	5.5
2015-16	3,19,109	5.7
2016-17	3,28,897	5.6
2017-18	3,47,547	5.6
2018-19	3,43,163	5.4
2019-20	3,86,954	6.08
2020-21	3,94,690	6.07
2021-22	4,08,582	6.2

7.6 An analysis of the time series data of project roads from 1970-71 to 2021-22 reveals that:

- **Steady Growth:** The total length of project roads has shown a consistent increase over the years, from 1,30,893 Km in 1970-71 to 4,08,582 Km in 2021-22.
- **Percentage Share Decline:** The percentage share of project roads in total roads has decreased from 14.30% in 1970-71 to 6.20% in 2021-22. This suggests that while project roads have increased in

absolute terms, the overall road network may have expanded at a faster rate.

- **Recent Increases:** Notable increases in project road length occurred in recent years, particularly from 2019-20 to 2021-22, reflecting intensified infrastructure development efforts.

These trends highlight the continuous expansion of project roads, contributing to improved connectivity and support for various sectors and strategic initiatives.

Chart 7.1: The trends of construction of Project Roads from 2010 to 2022

The State/UT-wise break-up of Project Roads

7.7 It may be seen from the Chart 7.2 that Gujarat accounted for the largest share (10.64%) in total Project Roads as on 31st March 2022, followed by Uttar Pradesh (10.54%), Madhya Pradesh (8.65%),

Karnataka (7.47%) and Assam (6.96%). These five States together account for about 44.26% of the total length of Project Roads as on 31.03.2022. The State/UT-wise break-up of Project Roads is given in the **Annexure 2.7.1**.

Table 7.3: State/UT wise distribution of Project Roads as on 31st March, 2022

S. No.	Name of State/UT	Total	Surfaced	%age of surfaced road
1	Andhra Pradesh	10,888	3,484	32.00

Chart 7.2: State/UT-wise Length of Project Roads (in Km) as on 31st March, 2022

7.8 The details at **Annexure 2.7.2 to 2.7.8** and the summary in **Annexure 2.7.1** reveals that out of the total of 4,08,582 Km of Project Roads, as on 31st March, 2022, Forest Roads (2,12,702 Km) approximately account for 52% followed by Irrigation Department Roads (1,48,122 Km) with a share of about 36% . The remaining 12% of Project Roads comes under the purview of coal fields and mines of Coal India Ltd.; BRO Roads, SAIL & NMDC; Sugarcane and Electricity Departments of States and UTs.

7.9 Since Forest Roads run through reserved forest areas and wild life sanctuaries, only a 43% share are surfaced in 2022. Out of total surfaced forest roads of length 91,370 Km, B.T. / C.C. roads constitute about 52% and the remaining 48% is constituted by the Water Bound Macadam roads.

7.10 Three specific areas which got boost consequent to increase in total project road are:

1. **Industrial and Resource Areas:** The

increase in project roads in coal fields, coal mines, plant areas of SAIL, and NMDC reflects progress in development to support industrial activities and resource extraction, contributing to economic growth.

2. **Agricultural Support:** The expansion of roads under the Sugarcane Departments of States/UT indicates efforts to improve transportation networks for agricultural produce, benefiting farmers and the agricultural sector.

3. **Strategic Infrastructure:** The involvement of the Border Roads Organisation (BRO) in developing project roads highlights the strategic importance of these roads for national security and border area development.

In summary, it signifies the role of project roads in supporting various sectors and strategic initiatives, contributing to overall infrastructure development and economic progress.

A blue arrow graphic pointing to the right, with a gradient from dark blue on the left to light blue on the right. The text "Section - 8" is centered within the arrow.

Section - 8

SECTION - 8

Major Schemes/Initiatives of Ministry of Road Transport and Highways

8.1 National Highways (NHs)

The Ministry of Road Transport & Highways is primarily responsible for development and maintenance of National Highways (NHs). Length of NH network in the country as on 31.03.2022 is 1,41,345 Km. NHs comprise only 2.2% of total road network but carry about 40% of the road traffic.

8.1.1. The development and maintenance works are being implemented on the agency basis. The State Government (State PWDs), Border Roads Organisation (BRO), National Highways Authority of India (NHAI) and National Highways and Infrastructure Development Corporation Limited (NHIDCL) are implementing the development and maintenance works on NHs.

8.1.2. Development and maintenance of NHs is a continuous process. Works on NHs are taken up accordingly based on traffic density, condition of roads, inter-se priority and availability of funds.

8.1.3 Major Programmes/ Schemes being implemented by the Ministry include the following:

- (i) Bharatmala Pariyoajana Phase-I [including subsumed National Highways Development Project (NHDP)]
- (ii) Special Accelerated Road Development

Programme for North-Eastern Region (SARDP-NE)

- (iii) Special Programme for development of Roads in Left Wing Extremism affected Area (LWE), including Development of Vijayawada-Ranchi Road
- (iv) Externally Aided Projects (EAP)
- (v) Char Dham Pariyojana

8.2 Major Schemes of the Ministry

8.2.1 Bharatmala Pariyojana

8.2.1.1 Bharatmala Phase-I (including subsumed National Highways Development Project (NHDP))

The Ministry has taken up detailed review of NHs network with a view to develop the road connectivity to Border areas, development of Coastal roads including road connectivity for Non-Major ports, improvement in the efficiency of National Corridors, development of Economic Corridors, Inter Corridors and Feeder Routes along with integration with Sagarmala, etc., under Bharatmala Pariyojana. The Bharatmala Pariyojana envisages development of about 26,000 Km length of Economic Corridors, which along with Golden Quadrilateral (GQ) and North-South and East-West (NS-EW) Corridors are expected to carry majority of the Freight Traffic on roads. Further, about 8,000 Km of Inter Corridors and

about 7,500 Km of Feeder Routes have been identified for improving effectiveness of Economic Corridors, GQ and NS-EW Corridors. The programme envisages development of Ring Roads / bypasses and elevated corridors to decongest the traffic passing through cities and enhances logistic efficiency; 28 cities have been identified for Ring Roads; 125 choke points and 66 congestion points have been identified for their improvements. Further, in order to reduce congestion on proposed Corridors, enhance logistic efficiency and reduce logistics costs of freight movements, 35 locations have been identified for development of Multimodal Logistics Parks.

The Public Investment Board (PIB) has recommended the proposal during its meeting held on 16.06.2017. Cabinet Committee on Economic Affairs (CCEA) has approved the Bharatmala Pariyojana

Phase-I. The minutes of the meeting were circulated vide Cabinet Secretariat's letter dated 26.10.2017.

8.2.1.2 Sources of funding for Bharatmala Phase-I

The Bharatmala Pariyojana Phase-I (approved for estimated cost of Rs. 6,92,324 crore including other ongoing schemes) is to be funded from Cess (Rs. 2,37,024 crore) collected from Petrol & Diesel (as per Central Road & Infrastructure Fund Act, 2000, erstwhile CRF Act, 2000), amount collected from toll (Rs. 46,048 crore) apart from additional budgetary support (Rs. 59,973 crore), Expected monetisation of NHs through TOT (Toll-Operate-Transfer) (Rs. 34,000 crore), Internal & Extra Budgetary Resources (IEBR) (Rs. 2,09,279 crore) and Private Sector Investment (Rs. 1,06,000 crore) as per Financing Plan upto 2021-22.

Phase-I of Bharatmala Pariyojana includes development of:-

S. No.	Scheme	Length (Km)	Cost (Rs. crore)
1.	Economic Corridors	9,000	1,20,000
2.	Inter-Corridors & feeder roads	6,000	80,000
3.	National Corridor Efficiency improvement	5,000	1,00,000
4.	Border & International connectivity roads	2,000	25,000
5.	Coastal & port connectivity roads	2,000	20,000
6.	Expressways	800	40,000
	Sub Total	24,800	3,85,000
7.	Ongoing Projects, including NHDP*	10,000	1,50,000
	Total	34,800	5,35,000

**-balance works under various phases of National Highways Development Project (NHDP) shall be fully subsumed under the Bharatmala Pariyojana, to remove overlap and undertake comprehensive development. Balance works under NH(O), SARDP-NE, EAP & LWE schemes would continue under relevant schemes*

8.2.1.3 Expenditure / Release since 2014-15 for NHDP/ Bharatmala Phase-I (including

debt servicing and annuity payments for NHDP/ Bharatmala Projects):-

Year	Amount in Rs. Crore										Grand Total
	CRF Cess	Toll Remittances	TOT Remittances	BMP	Total (GBS)	IEBR Raised	Total Budgetary	Others*	Total	Pvt. Sector Investment Actual	
2014-15	9,565	5,448			15,013	3,343	18,356		18,356	19,232	37,588
2015-16	21,018	6,500			27,518	23,281	50,799		50,799	29,770	80,569
2016-17	7,410	7,500			14,910	33,118	48,028		48,028	16,029	64,057
2017-18	15,429	8,462			23,892	50,533	74,425		74,425	16,501	90,926
2018-19	16,567	9,570	9,682		35,819	61,217	97,036		97,036	20,618	1,17,654
2019-20	15,733	10,600	5,000		31,333	74,988	1,06,321		1,06,321	21,926	1,28,247
2020-21	27,249	11,500	7,262	50	46,061	65,036	1,11,097	9,731	1,20,828	12,476	1,33,304
2021-22	39,210	12,650	5,000	940	57,800	65,150	1,22,950	21,356	1,44,306	19,206	1,63,512

IEBR – Internal & Extra Budgetary Resources

*- Others includes funds from monetisation of NHs (including InvIT & Project based Financing)

8.2.1.4 Status of appraisal and award of Projects:-

(a) Status of appraisal and award – Mode of Implementation-wise:

In Bharatmala Pariyojana, 60% projects on Hybrid Annuity Mode, 10% projects on BOT(Toll) Mode and 30% projects on EPC mode have been envisaged respectively.

Total of 660 nos. road projects with an aggregate length of 22,624 Km have been approved & awarded till 31.03.2022 under Bharatmala

Pariyojana (including 150 nos. of residual NHDP works of aggregate length of 5,762 Kms) with Total Capital Cost as Rs. 6,93,186 cr. Out of the total approved 660 nos. projects, 415 nos. of projects covering an aggregate length of 12,215 Kms have been approved on EPC mode, 239 nos. of projects covering an aggregate length of 9,935 kms on HAM mode and 6 Nos. of projects covering an aggregate length of 473 kms on BOT (Toll) mode [EPC: HAM: BOT:: 54%:44%:2%].

Details are as follows (31.03.2022): - Overall

S. No.	Mode of Implementation	Bharatmala & Residual NHDP - Awarded		Bharatmala & Residual NHDP – Approved – To be Awarded		Bharatmala & Residual NHDP – Awarded and Approved		Capital Cost	% Length
		No. of Projects	Length (Km)	No. of Projects	Length (Km)	No. of Projects	Length (Km)	(Rs. Cr.)	
1	EPC	410	12,131	5	84	415	12,215	3,12,569	54%
2	HAM	233	9,708	6	227	239	9,935	3,68,016	44%
3	BOT Toll	5	408	1	66	6	473	12,600	2%
Total		648	22,247	12	377	660	22,624	6,93,186	100%

(b) Status of appraisal and award - Overall: -

Out of the 24,800 Km approved under Bharatmala Pariyojana Phase-I, total of 500 projects of length 16,509 Km have been awarded till 31.03.2022. Similarly,

out of the residual NHDP component to be completed Bharatmala Phase-I, a total of 148 projects covering 5,738 Km length have been awarded till 31.03.2022. The details are as under:

Sr No.	Type of Corridor (approved length & amount)	Awarded		Appraised but Pending for Award		Total		Completed Length (Km)
		No. of Projects	Length (Km)	No. of Projects	Length (Km)	No. of Projects	Length (Km)	
1	Economic Corridors	211	6,588	4	133	215	6,721	2,104
2	Inter Corridor Routes	65	2,496	4	137	69	2,633	743
3	Feeder Routes	20	727	1	17	21	744	181
4	National Corridor	65	1,839	1	66	66	1,904	858
5	National Corridor Efficiency Improvement	27	738	0	0	27	738	417
6	Expressway	84	2,412	0	0	84	2,412	613
7	Border Roads & International Connectivity	17	1,441	0	0	17	1,441	1,134
8	Coastal Roads	2	77	0	0	2	77	54
9	Port Connectivity	9	193	0	0	9	193	15
	Bharatmala Total	500	16,509	10	353	510	16,862	6,120
10	NHDP	148	5,738	2	25	150	5,762	2,868
	Grand Total	648	22,247	12	377	660	22,624	8,988

8.2.2 Improvement of road connectivity in Left Wing Extremism (LWE) affected areas

8.2.2.1. The Government has approved a scheme for development of about 1,177 Km of NHs and 4,276 Km of State Roads in Left Wing Extremism (LWE) affected areas as a Special Project with an estimated cost of about Rs. 7,300 Crore. As on 30th March, 2022, the detailed estimates for 5,422 Km length have been sanctioned at an estimated cost of Rs. 8,946 Crore, out of which, works on 5,422 Km length costing Rs. 8,996 Crore have been awarded. Development in 5,081 Km length has been completed and cumulative expenditure incurred till 31.03.2022 is Rs. 8,466 Crore.

8.2.2.2 Development of Vijayawada Ranchi route

Out of 1,622 Km long LWE affected Vijayawada - Ranchi route, development of 600 Km (net length 592 Km) of State Roads in Odisha (549 Km Newly declared NH and 43 Km SH), not covered in any Central or State Scheme has been approved by the Government at a cost of Rs 1,200 crore on 4th November, 2010.

So far, the detailed estimates for all the 9 packages in an aggregate length of 592 Km have been sanctioned at an estimated cost of Rs. 1,347 crore and

works were awarded. The development on 592 Km has been completed at a cumulative expenditure of Rs. 1,112 crore.

8.2.3 Special Accelerated Road Development Programme for North-Eastern region (SARDP-NE)

The scheme has been envisaged to be taken up under three parts as under:

- (i) Phase 'A' of SARDP-NE approved by the Government envisages improvement of about 4,099 Km length of roads (3,014 Km of NH and 1,085 Km of State roads). However actual length as per DPR is 4007 Km. Out of 4007 Km 3,654 Km roads has been approved for execution and balance 353 Km is yet to be awarded. Till March, 2022, 2,970 Km of road has been completed.
- (ii) Phase 'B' of SARDP-NE, covers 3,723 Km (2,210 Km NHs and 1,513 Km of State roads) of road. Phase 'B' SARDP-NE shall be taken up after completion of Phase 'A'.
- (iii) Arunachal Pradesh Package: The Arunachal Pradesh Package for Road & Highways involving development of about 2,319 Km length of road (2,205 Km of NHs & 114 Km of State / General Staff / Strategic Roads) has also been approved by the Government. Projects on 776 Km are to be taken up on BOT

(Annuity) mode and the remaining are to be developed on EPC mode / Item Rate Contract as per Ministry's extant policy. However actual length as per DPR is 1,991 Km. Till March, 2022, projects in total length of about 1,991 Km have been awarded out of which 1,244 Km has been completed.

An amount of Rs. 45,840 crore has been spent till 31.03.2022 in SARDP-NE including Arunachal Pradesh Package of roads.

8.2.4 Externally Aided Projects

8.2.4.1 National Highway Interconnectivity Improvement Programme (NHIIP) by World Bank Loan Assistance

- (i) About 1,120 Km approved length [aggregate length- 1,087 Km at an revised cost of Rs. 6,461 Km] of NHs are to be improved to 2-lane NH standards following corridor development approach under the World Bank Loan Assistance in Phase-I. Loan Agreement for Phase-I (1,120 Km under first tranches of Loan Assistance of US\$ 500 Million) was signed with World Bank on 1 July, 2014.
- (ii) For the proposed execution of projects under World Bank Loan Assistance as mentioned above, the cost of LA and utility shifting are to be borne by the Government of India as per the policy of the World Bank. Till March 2022, 1020

Km of length has been completed with total expenditure of Rs. 5600 crore.

- (iii) NHIIP loan has been closed on 30.09.2020 and balance works of NHIIP scheme have been transferred in Green National Highways Corridor Project (GNHCP) scheme with the Loan Assistance of World Bank.

8.2.4.2 Green National Highways Corridor Project (GNHCP) with the Loan Assistance of World Bank

- (i) The project aims at up-gradation and rehabilitation to 2-lane/2-lane with paved shoulders/4-lane configuration, and strengthening of stretches of various National Highways covering a total length of 781.38 Km in the States of Himachal Pradesh, Rajasthan, Uttar Pradesh and Andhra Pradesh, with loan assistance of the World Bank with a total loan amount of US \$ 500 Million and total project cost of Rs. 7,662.47 crores. Till March, 2022, projects in a length of 704 Km has been awarded and projects in about 288 Km length has been started and 45 Km length has been completed.
- (ii) For the proposed execution of projects under World Bank Loan Assistance as mentioned above, the cost of LA and utility shifting are to be borne by the Government of India as per policy of the World Bank. The loan agreement for the project is signed on 22.12.2020.

8.2.4.3 Japan International Cooperation Agency (JICA) Loan Assistance

- (i) 24 projects (on 8 NH stretches) having NH length of about 807 Km amounting to about Rs. 19508 crore are to be improved under the Loan Assistance from JICA. For the proposed execution of projects the cost of LA and utility shifting are to be borne by the Government of India. Out of these 24 projects, 22 projects are to be executed by NHIDCL, 1 project each is being executed by the Ministry through State PWD (BSRDCL) and by NHAI.
- (ii) The Ministry has awarded 92.935 Km, Gaya- Rajgir - Nalanda – Bihar Sharif section of NH 82 in the State of Bihar at sanctioned cost of Rs. 2138 crore. The loan component of this project is JP¥ 21.426 billion (Rs. 1410 crore). About 65 Km of length has already been completed of this stretch. Initially work was delayed due to non-availability of land & slow progress of Contractor. Now, encumbrance free land is available. The overall progress of the project is 75% achieved till March, 2022.
- (iii) NHAI awarded 127 Km, Patna – Gaya - Dhobi section of NH 22 in the State of Bihar with sanctioned cost of Rs. 1795 crore. The loan component of this project is JP¥ 22.903 billion (Rs. 1552.95 cr). Due to poor

performance of the Company as well as Company going to NCLT, the project has been foreclosed. Work has been re-awarded in 3 packages & the overall progress of the project is 25% achieved till March, 2022.

- (iv) Remaining 22 nos. projects (on 6 NH stretches) are with NHIDCL in a length of 588 Km amounting to Rs. 15,575 crore. All these 22 projects are in progress.

8.2.4.4 Asian Development Bank (ADB) Loan Assistance

- (i) The Ministry awarded 2 projects of about 127.84 Kkm length in the State of West Bengal at revised cost of Rs. 1,659 crore. The loan component of this project is US\$ 145 Million. 100% work has been completed in July/November, 2019.
- (ii) 3 projects with NHIDCL [length 67 Km, Rs. 1789 crore] – Two Projects i.e., (Mehi Bridge) and (2 Laning Imphal-Moreh section from Km 350 to 395.68) have been completed in FY 2021-22 whereas (2/4 L Imphal-Moreh section from Km 330 to 350) is in progress with physical progress of 56.51% till March, 2022.

8.2.5 Char Dham Pariyojana

- (i) The Ministry has taken up the connectivity Improvement Program for Char-Dham (Kedarnath, Badrinath,

Yamunotri & Gangotri) in Uttarakhand. The program includes projects of improvement /development of 827 Km length of NHs at total estimated cost of about Rs. 12,070 crore. The projects include provisions like widening of existing narrow & geometrically deficient NHs to 2-Lane NH standards with paved shoulders, protection of landslide prone zones, construction of bypasses, long bridges, tunnels, bus /truck lay bye /rest area and elevated corridors.

- (ii) Out of total 53 civil works covering the entire length under Chardham project, 41 civil works of total project cost amounting to Rs. 9,733 crore (including cost of pre-construction works amounting to Rs. 491 crore) in a length of 678 Km have been sanctioned. 38 works in a length of 647 Km amounting to Rs. 8,379 crore have been awarded out of which 19 works amounting to Rs. 5590 crore in length of 384 Km are ongoing and 19 works amounting to Rs. 2788 crore in a length of 262 Km have been completed. Regarding the balance 3 no. of sanctioned works, 1 work in length of 2.52 Km and cost of Rs. 143.78 crore has been de-sanctioned, DPR of one work in length of 22.647 Km is to be revised as per Orders dated 14.12.2021

of Hon'ble Supreme Court and one work in length of 6.35 Km & cost of Rs. 258.85 Cr. is in Tender Stage. For the remaining 12 works which are yet to be sanctioned, DPRs are being finalised as per decision of the Hon'ble Supreme Court dated 14.12.2021. Physical progress of ongoing works is 87.43% as on 31.03.2022, total length of 567 Km has been completed out of awarded length of 647 Km.

- 8.2.6. NHs stretches not covered under any of the above schemes are taken up for development under National Highway Original [NH(O)] works depending upon traffic density, condition of road, inter-se priority, committed spill over liabilities of previous years' sanctions and available allocation for the year.

8.3. Rectification of Accident Black Spots

High priority has been accorded for identification and rectification of black spots (accidents prone spots on National Highways). Concerted efforts towards improvement of road safety through engineering measures on National Highways have been made. So far 5,803 no. of black spots have been identified and out of this, 3,709 no. of black spots have been rectified till 31.03.2022. Identification and rectification of Black

Note : (1) # Included in Other PWD Roads.

(2) Totals may not add up due to rounding off of decimals.

(3) The second row of each year indicates the percentage share of each category of roads to the total road length.

(4) * Includes roads constructed under PMGSY launched in December 2000 and JRY launched in 1989-90.

(5) JRY road lengths for years since 1996-97 are the same as on 31.3.1996.

Source: This category of roads are built by State PWD/Rural Works Department of States/UTs.

Note: 1. Shortfall in road length of Chhattisgarh due to conversion of PWD road into District roads.

2. Shortfall in road length of Tripura because earlier reported road length was inclusive of PMGSY.

3. Shortfall in road length of Uttarakhand due to conversion of PWD road into State highways and Major District roads.

Note : (1) # Included in Other PWD Roads.

(2) Totals may not add up due to rounding off of decimals.

(3) The second row of each year indicates the percentage share of each category of roads to the total road length.

(4) * Includes roads constructed under PMGSY launched in December 2000 and JRY launched in 1989-90.

(5) JRY road lengths for years since 1996-97 are the same as on 31.3.1996.
